2                                   **DISTRICT OF NEVADA**

3   Signify North America Corporation, et al.,

Case No.: 2:22-cv-02095-JAD-DJA

4                   Plaintiffs

5   v.

**Claim-Construction Order**

6   Lepro Innovation Inc., et al.,

[ECF No. 54]

7                   Defendants

8  
9           This is a patent-infringement suit over LED lighting products. Plaintiffs Signify North  
10 America Corporation and Signify Holding B.V. (collectively, “Signify”) allege that defendants  
11 Lepro Innovation Inc., LE Innovation Inc., Innovation Rules Inc., Home Ever Inc., and  
12 Letianlighting Inc. (collectively, “Lepro”) infringed seven of Signify’s patents covering various  
13 LED technologies. In addition to disagreeing about how several of the patents’ terms should be  
14 construed, the parties dispute whether the terms “controller,” “adjustment circuit,” and “power  
15 circuitry” as used in two of the patents are means-plus-function terms subject to 35 U.S.C.  
16 § 112(f), and whether the term “background noise” as used in one of the patents is indefinite.  
17 Having reviewed the parties’ extensive claim-construction briefs and after a full-day *Markman*  
18 hearing, I construe some terms that need construction; conclude several others need no  
19 construction; hold that the term “background noise” is not indefinite; and find that the terms  
20 “controller,” “adjustment circuit,” and “power circuitry” are not means-plus-function terms.

## Discussion

### I. U.S. Patent No. 7,014,336

#### A. Overview

The '336 patent is titled “Systems and Methods for Generating and Modulating Illumination Conditions,” and one aspect of the invention is directed towards using LEDs to generate “high-quality white light.”<sup>1</sup> According to the patent, this can be accomplished “by mixing the electromagnetic radiation from a plurality of component illumination sources such as LEDs” and, more specifically, “by choosing LEDs that provide a white light that is targeted to the human eye’s interpretation of light”<sup>2</sup> or “photopic response.”<sup>3</sup> The patent explains that “traditional mixing methods” used to create white light “still produce an abnormal appearance to the human eye.”<sup>4</sup> This “artificial” appearance is due in part to “dramatic peaks” or “spikes” in the electromagnetic (light) spectrum.<sup>5</sup> Indeed, “part of the reason that fluorescent light looks very artificial” is because of such peaks.<sup>6</sup>

The patent goes on to note that “most artificial light” has “some peaks and valleys” that fall “within the area of the human eye’s photopic response.”<sup>7</sup> But to create “high-quality white light” (according to at least one embodiment) it is “desirable to close the gap between the lowest

<sup>7</sup> *Id.* at 16:23.

valley and the maximum peak,”<sup>8</sup> and “the less difference between those two points the better.”<sup>9</sup> Moreover, “[t]he lowest valley in the visible range should have a greater intensity than the intensity attributable to background noise as would be understood by one of skill in the art.”<sup>10</sup>

**B. “Background noise”**

| Signify’s Proposed Construction   | Lepro’s Proposed Construction | Court’s Construction   |
|---|-------------------------------|--|
| Plain and ordinary meaning<br>(If construction required:<br>“electromagnetic radiation<br>produced independent of the<br>lighting fixture”) | Indefinite                    | “electromagnetic radiation<br>produced independent of the<br>lighting fixture” |

Signify contends that the term “background noise” should be given its plain and ordinary meaning but, if construction is required, it should be construed as “electromagnetic radiation produced independent of the lighting fixture.”<sup>11</sup> Lepro argues that this term is indefinite.<sup>12</sup> A claim is indefinite if, when read in the context of the specification and prosecution history, it fails “to inform those skilled in the art about the scope of invention with reasonable certainty.”<sup>13</sup> “Indefiniteness must be proven by clear and convincing evidence.”<sup>14</sup> For several reasons, Lepro has not met its burden of demonstrating by clear and convincing evidence that the term “background noise” is indefinite.

<sup>8</sup> *Id.* at 22:34–36.

<sup>9</sup> *Id.* at 22:21–22.

<sup>10</sup> *Id.* at 22:32–35.

<sup>11</sup> ECF No. 54 at 15.

<sup>12</sup> ECF No. 60 at 6.

<sup>13</sup> *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 910 (2014).

<sup>14</sup> *Sonix Tech. Co. v. Publ’ns Int’l, Ltd.*, 844 F.3d 1370, 1377 (Fed. Cir. 2017) (citing *Teva Pharms. USA, Inc. v. Sandoz, Inc.*, 789 F.3d 1335, 1345 (Fed. Cir. 2015)).

1 Lepro first characterizes as “unfounded,” “conclusory,” and “without objective support”  
 2 Signify’s statements that this is a common term that a person of ordinary skill in the art  
 3 (POSITA) would have understood.<sup>15</sup> But the ’336 patent itself explicitly states that this term has  
 4 a meaning that would have been understood by a POSITA at the time of invention.<sup>16</sup> Lepro  
 5 offers nothing to rebut this intrinsic evidence other than attorney argument via a single footnote  
 6 characterizing this as a “passing, self-serving statement.”<sup>17</sup> But “attorney argument is generally  
 7 insufficient to demonstrate invalidity,”<sup>18</sup> and this statement from the patent does, at minimum,  
 8 indicate that “background noise” has a meaning in the context of the ’336 patent that a POSITA  
 9 would have understood at the time of invention.

10 But the patent doesn’t define “background noise,” so Signify offers a definition from an  
 11 electrical-engineering dictionary: “the noise that typically affects a system but is produce  
 12 independent of the system.”<sup>19</sup> Lepro argues that this definition is “irrelevant” and only concerns  
 13 other fields.<sup>20</sup> While certain latter parts of the definition do explain its specific meaning in  
 14 distinct fields, its main definition of “background noise” appears to be generally consistent with  
 15

---

16 <sup>15</sup> ECF No. 60 at 8.

17 <sup>16</sup> ’336 Patent, 22:32–35.

18 <sup>17</sup> ECF No. 60 at 8 n.9.

19 <sup>18</sup> *SunPower Corp. v. PanelClaw, Inc.*, 2016 WL 4578324, at \*5 (D. Del. Aug. 31, 2016) (collecting cases); *see also Mallinckrodt, Inc. v. Masimo Corp.*, 147 F. App’x 158, 179 (Fed. Cir. 2005); *Wirtgen Am., Inc. v. Caterpillar, Inc.*, 2023 WL 2456090, at \*5 (D. Del. Mar. 10, 2023).

20 <sup>19</sup> ECF No. 54. at 16 (citing ECF No. 54-8). This dictionary defines “background noise” as “the noise that typically affects a system but is produced independent of the system. This noise is typically due to thermal effects in materials, interpreted as the random motion of electrons, and the intensity depends on the temperature of the material. In radio channels, background noise is typically due to radiation that is inherent to the universe and due mainly to radiation from astronomical bodies. There is a fundamental lower bound to the intensity of such noise [that] is solely dependent on the universe and independent of antenna and receiver design”).

23 <sup>20</sup> ECF No. 60 at 8.

1 the usage of this term in the '336 patent and Signify's proposed construction; so it further  
 2 supports Signify's position that a POSITA would have understood this term's meaning when  
 3 viewing it in context of the claim language and specification.<sup>21</sup> Still, this definition is quite  
 4 broad, and Signify (via its proposed construction) has contended that a POSITA would  
 5 understand the term as used here to have a meaning more narrowly tailored to the context of the  
 6 '336 patent. This proposed construction is consistent with the dictionary definition<sup>22</sup> and the  
 7 term's use in the '336 patent,<sup>23</sup> and Lepro hasn't shown that a POSITA would understand it to  
 8 mean something else.

9 Lepro has, however, argued that even this proposed construction is indefinite. Lepro first  
 10 notes that the proposed definition "doesn't explain how background noise is measured."<sup>24</sup> But it  
 11 doesn't appear that measuring electromagnetic radiation was a novel concept that would be  
 12 unfamiliar to a POSITA at the time of invention; indeed, the patent describes and depicts  
 13 electromagnetic-radiation measurements for various exemplary lighting fixtures.<sup>25</sup> Lepro next  
 14 contends that this proposed definition is indefinite because it doesn't explain "what the source of  
 15 the 'electromagnetic radiation' is to take measurement from," noting that "background noise"  
 16 would vary "depending on the lighting conditions in the environment surrounding the 'lighting  
 17  
 18

---

19 <sup>21</sup> ECF No. 54-8 at 4.

20 <sup>22</sup> The dictionary also notes that in the context of "radio channels" the background noise is  
 21 "typically due to radiation." ECF No. 54-8 at 4. The fact that the definition references  
 22 "radiation" generally, rather than electromagnetic radiation specifically, and doesn't specifically  
 23 refer to lighting fixtures, doesn't negate this definition's value if only as a reference point to  
 24 extrapolate this term's specific meaning as it is used the '336 patent.

25 <sup>23</sup> See, e.g., '336 Patent, 5:13–28.

<sup>24</sup> ECF No. 60 at 9.

<sup>25</sup> See, e.g., '336 Patent, Figs. 14–17, 22:60–24:17.

1 fixture.”<sup>26</sup> But the fact that “background noise” is not a constant doesn’t make it immeasurable.  
 2 And even if it does mean that infringement can only be determined after the lighting fixture is  
 3 used in a particular environment, that is not grounds for finding the term indefinite.<sup>27</sup>

4 Signify’s proposed construction is consistent with both intrinsic and extrinsic evidence,  
 5 and Lepro hasn’t demonstrated by clear and convincing evidence that the term “background  
 6 noise” or Signify’s proposed definition are indefinite. So I construe the term “background noise”  
 7 to mean “electromagnetic radiation produced independent of the lighting fixture.”

## 8 II. U.S. Patent Nos. 7,038,399 and 7,352,138

### 9 A. Overview

10 The ’138 patent is a continuation of the ’399 patent<sup>28</sup> and they share the same  
 11 specification.<sup>29</sup> These patents relate to “methods and apparatus for providing power to devices  
 12 on A.C. power circuits” and in particular concern using “light emitting diode (LED) based  
 13 devices”<sup>30</sup> with traditional A.C. power circuits controlled by conventional dimmers.<sup>31</sup> The  
 14 patent teaches that LED-based light sources are generally “incompatible with dimmer circuits  
 15  
 16

---

17 <sup>26</sup> ECF No. 60 at 9.

18 <sup>27</sup> *Nevro Corp. v. Bos. Sci. Corp.*, 955 F.3d 35, 40 (Fed. Cir. 2020) (“Definiteness does not  
 19 require that a potential infringer be able to determine ex ante if a particular act infringes the  
 20 claims.”). Lepro similarly argues that “background noise” is indefinite because the intensity of  
 21 permissible background noise can vary based on the intensity of the light’s lowest spectral  
 valley. ECF No. 60 at 10. This too suggests that infringement could only be determined after a  
 lighting fixture was used in a particular environment, but that likewise doesn’t render the term  
 indefinite.

22 <sup>28</sup> ’138 Patent, 1:8–13.

23 <sup>29</sup> ECF No. 54 at 17; ECF No. 60 at 10.

<sup>30</sup> ’138 Patent, 1:33–37.

<sup>31</sup> *Id.* at 9:4–22.

1 that provide A.C. output signals” as they operate “based on substantially D.C. power sources,”<sup>32</sup>  
 2 and thus do not brighten or dim like incandescent lights would in response to the “chopped” or  
 3 non-standard A.C. signals produced by traditional A.C. dimmer circuits.<sup>33</sup> This, of course,  
 4 “impedes convenient substitution of LED-based light sources into pre-existing lighting systems  
 5 in which conventional light sources are operated via A.C. dimmer circuits.”<sup>34</sup> In order to make  
 6 LEDs compatible with signals from A.C. dimmer circuits, the patents disclose a “controller” to  
 7 convert A.C. signal into a D.C. signal that can provide power to an LED-based light source.<sup>35</sup> In  
 8 some embodiments, the “controller” is comprised of “power circuitry” that “provides an  
 9 essentially stable D.C. voltage as a power supply for the LED-based light source.”<sup>36</sup> The  
 10 controller may also include an “adjustment circuit” that varies the light output of the LED in  
 11 response to a user operating the traditional A.C. dimmer.<sup>37</sup>

## 12 **B. Applicable law**

13 Lepro contends that three terms from the ’399 and ’138 patents—controller, power  
 14 circuitry, and adjustment circuit—are “means-plus-function” terms under 35 U.S.C. § 112(f).  
 15 That section gives patentees the option of drafting a patent using functional terms (what the  
 16 claimed invention does) instead of implementation terms (how the claimed function operates).<sup>38</sup>  
 17 Congress enacted § 112(f) to empower patentees to use functional claiming if they can ensure

---

19 <sup>32</sup> *Id.* at 9:15–19.

20 <sup>33</sup> *See id.* at 2:38–54.

21 <sup>34</sup> *Id.* at 9:20–22.

22 <sup>35</sup> *Id.* at 10:49–53.

22 <sup>36</sup> *See id.* at 12:64–13:2 (cleaned up).

23 <sup>37</sup> *Id.* at 14:4–22.

<sup>38</sup> *See* 35 U.S.C. § 112(f).

1 that the public knows how that function can be accomplished.<sup>39</sup> So when a patentee uses  
 2 functional language in a patent, he must also disclose in the specification what structure, or  
 3 which devices, can be used to carry out the function. Analysis under § 112(f) involves a two-  
 4 step process: (1) the court decides whether a term is functional; if it is, then (2) the court must  
 5 determine if the patentee has satisfied § 112(f) by sufficiently describing “the structure, material,  
 6 or acts” to perform the function.<sup>40</sup> If a patentee uses a functional term without sufficiently  
 7 disclosing the structure, the term is indefinite and cannot be enforced in an infringement action.<sup>41</sup>

8       The first step of the § 112(f) analysis is informed by one of two presumptions. If the  
 9 claim language includes the word “means” the court starts with the presumption that it is a  
 10 functional term and that § 112(f) applies.<sup>42</sup> But when, like here, the term “means” is not in the  
 11 claim language, the court presumes that the term is not functional and that § 112(f)’s  
 12 requirements do not apply.<sup>43</sup> From 2004 to 2015, the presumption “flowing from the absence of  
 13 the word ‘means’ [was] a strong one that [was] not readily overcome.”<sup>44</sup> But in *Williamson v.*  
 14 *Citrix Online*, the Federal Circuit held that this “heightened burden is unjustified” and that there  
 15 is no reason to “characteriz[e] [] that presumption as ‘strong.’”<sup>45</sup> So courts now must simply ask  
 16 whether “the words of the claim are understood by persons of ordinary skill in the art to have a  
 17

---

18 <sup>39</sup> See Brad A. Schepers, *Interpretation of Patent Process Claims in Light of the Narrowing*  
 19 *Effect of 35 U.S.C. § 112(6)*, Ind. L. Rev. 1133, 1134, 1139–40 (1998).

20 <sup>40</sup> 35 U.S.C. § 112(f).

21 <sup>41</sup> *Williamson v. Citrix Online, LLC*, 792 F.3d 1339, 1352 (Fed. Cir. 2015).

22 <sup>42</sup> *Id.* at 1349.

23 <sup>43</sup> *Id.*

<sup>44</sup> *Lighting World, Inc. v. Birchwood Lighting, Inc.*, 382 F.3d 1354, 1358 (Fed. Cir. 2004);  
*Williamson*, 792 F.3d at 1348.

<sup>45</sup> *Williamson*, 792 F.3d at 1349.

1 sufficiently definite meaning as the name for structure.”<sup>46</sup> And “[w]hen the claim term lacks the  
 2 word ‘means,’ the presumption can be overcome . . . if the challenger demonstrates that the claim  
 3 term fails to ‘recite sufficiently definite structure’ or else recites ‘function without reciting  
 4 sufficient structure for performing that function.’”<sup>47</sup> “In determining whether this presumption  
 5 has been rebutted, the challenger must establish by a preponderance of the evidence” that  
 6 § 112(f) applies.<sup>48</sup>

7 During the *Markman* hearing, there was some disagreement about the correct standard for  
 8 rebutting this presumption stemming from defense counsel’s breakdown of the second part of the  
 9 standard for rebutting this presumption that is summarized in *Williamson*.<sup>49</sup> Lepro’s counsel  
 10 argued that this required (1) identifying the function and (2) determining whether the *claim*  
 11 recites sufficient structure for performing said function, which is generally consistent with the  
 12 language in *Williamson*. But Lepro’s breakdown of this language is structurally similar to the  
 13 two-step analysis courts perform *after* determining that § 112(f) does apply, which requires  
 14 (1) “identify[ing] the claimed function”<sup>50</sup> and then (2) “ascertain[ing] the corresponding  
 15 structures *in the written description* that perform [that] function[.]”<sup>51</sup> The second steps are  
 16 different, but it seems that the identical first steps and structural similarity led Signify’s counsel

---

17 <sup>46</sup> *Id.*

18 <sup>47</sup> *Id.* (citing *Watts v. XL Sys., Inc.*, 232 F.3d 877, 880 (Fed. Cir. 2000)).

19 <sup>48</sup> *Advanced Ground Info. Sys., Inc. v. Life360, Inc.*, 830 F.3d 1341, 1347 (Fed. Cir. 2016) (citing  
 20 *Apex Inc. v. Raritan Comput. Inc.*, 325 F.3d 1364, 1372 (Fed. Cir. 2003)).

21 <sup>49</sup> *Id.* (citing *Watts*, 232 F.3d at 880) (“When the claim term lacks the word ‘means,’ the  
 22 presumption can be overcome . . . if the challenger demonstrates that the claim term . . . recites  
 23 ‘function without reciting sufficient structure for performing that function.’”).

<sup>50</sup> *Omega Eng’g, Inc. v. Raytek Corp.*, 334 F.3d 1314, 1321 (Fed. Cir. 2003) (citing *Cardiac  
 Pacemakers, Inc. v. St. Jude Med., Inc.*, 296 F.3d 1106, 1113 (Fed. Cir. 2002)) (internal citation  
 omitted).

<sup>51</sup> *Id.* (citing *Cardiac Pacemakers*, 296 F.3d at 113) (emphasis added).

1 to believe that Lepro’s counsel was attempting to skip past determining whether § 112(f) applied  
2 in the first place.<sup>52</sup>

3 Regardless of the source of this disagreement, *Williamson* and the Federal Circuit  
4 decisions following and interpreting it are clear: “a claim term is subject to § 112(f) if it recites  
5 ‘function without reciting sufficient structure *for performing that function*.’”<sup>53</sup> So “[t]he  
6 question is not whether a claim term recites *any* structure” or “is utterly devoid of structure,” but  
7 “whether it recites *sufficient* structure” to perform the claimed function.<sup>54</sup>

### 8 C. “Controller”

| 9 Signify’s Proposed Construction   | Lepro’s Proposed Construction | Court’s Construction       |
|---|-------------------------------|----------------------------|
| 10 Plain and ordinary meaning;<br>11 (If construction required: “A circuit or component that controls”) | Means-plus-function term      | Plain and ordinary meaning |

13 Lepro argues that the term “controller” in the ’399 and ’138 patents is a means-plus-  
14 function term subject to § 112(f).<sup>55</sup> Signify counters that a POSITA would understand this term  
15 to connote structure and that it should be afforded its plain and ordinary meaning.<sup>56</sup>

17 <sup>52</sup> When arguing that Lepro’s counsel was not applying the correct standard, Signify’s counsel  
18 referenced *VDPP LLC v. Vizio, Inc.*, 2022 WL 885771, at \*3 (Fed. Cir. Mar. 25, 2022). But the  
19 portion of *Vizio* that Signify’s counsel highlighted merely clarified that “[w]hether the  
20 *specifications* disclose adequate corresponding structures for the claimed functions is a question  
we review at step two of the § 112(f) analysis.” *Id.* (emphasis added).

<sup>53</sup> *Egenera, Inc. v. Cisco Sys., Inc.*, 972 F.3d 1367, 1374 (Fed. Cir. 2020) (quoting *Williamson*,  
792 F.3d at 1348).

<sup>54</sup> *Id.*; see also *XR Commc’ns, LLC v. ARRIS Sols., Inc.*, 2023 WL 3529830, at \*3 (Fed. Cir. May  
18, 2023) (noting that § 112(f) is not avoided by “reciting something a POSITA would  
understand as structure . . . if a POSITA wouldn’t understand it as sufficient structure *for*  
*performing the claimed function*”).

<sup>55</sup> ECF No. 60 at 12.

<sup>56</sup> ECF No. 54 at 20.

1                   ***1. The specification doesn't define "controller."***

2           Lepro contends that § 112(f) applies because “[t]he specification expressly defines  
3 ‘controller’ in broad functional terms as ‘various apparatus relating to the operation of one or  
4 more light sources.’”<sup>57</sup> “[W]ords of a claim are generally given their ordinary and customary  
5 meaning as understood by a person of ordinary skill in the art when read in the context of the  
6 specification and prosecution history.”<sup>58</sup> One of the exceptions to this general rule is “when the  
7 patentee sets out a definition and acts as his own lexicographer.”<sup>59</sup> But the “standard[] for  
8 finding lexicography” is “exacting.”<sup>60</sup> “To act as its own lexicographer, a patentee must ‘clearly  
9 set forth a definition of the disputed claim term’ and ‘clearly express an intent to define the  
10 term.’”<sup>61</sup> And “[t]he patentee’s lexicography must, of course, appear *with reasonable clarity,*  
11 *deliberateness, and precision* before it can affect the claim.”<sup>62</sup>

12           The paragraph at issue, excerpted below, is undoubtedly broad:

13           The terms “processor” or “controller” are used herein  
14 interchangeably to describe various apparatus relating to the  
15 operation of one or more light sources. A processor or controller  
16 can be implemented in numerous ways, such as with dedicated  
17 hardware, using one or more microprocessors that are programmed  
using software (e.g., microcode) to perform various functions  
discussed herein, or as a combination of dedicated hardware to  
perform some functions and programmed microprocessors and  
associated circuitry to perform other functions.<sup>63</sup>

18  
19 <sup>57</sup> ECF No. 60 at 15.

20 <sup>58</sup> *Thorner v. Sony Comput. Ent. Am. LLC*, 669 F.3d 1362, 1365 (Fed. Cir. 2012) (citing *Phillips*  
*v. AWH Corp.*, 415 F.3d 1303, 1313 (Fed. Cir. 2005)).

21 <sup>59</sup> *Id.* (citing *Vitronics Corp. v. Conceptronic, Inc.*, 90 F.3d 1576, 1580 (Fed. Cir. 1996)).

22 <sup>60</sup> *GE Lighting Sols., LLC v. AgiLight, Inc.*, 750 F.3d 1304, 1309 (Fed. Cir. 2014).

23 <sup>61</sup> *Id.* (quoting *Thorner*, 669 F.3d at 1365) (cleaned up)

<sup>62</sup> *Abbott Lab’ys v. Syntron Bioresearch, Inc.*, 334 F.3d 1343, 1354 (Fed. Cir. 2003) (cleaned up).

<sup>63</sup> ’399 Patent, 6:19–28.

1 Lepro contends that the “are used herein” phrase “invokes the ‘own lexicographer law’  
2 and provides a binding definition.”<sup>64</sup> Use of the phrase “as used herein” or variations thereof can  
3 express an intent to define.<sup>65</sup> But the language that follows that phrase here lacks the clarity and  
4 precision necessary to make any attempt to define effective. The first sentence of the paragraph  
5 notes that “processor” and “controller” are “used to describe various apparatus.”<sup>66</sup> But  
6 “apparatus” has a much broader meaning than “controller” or “processor” and is a widely  
7 recognized nonce word, and the remainder of that sentence does almost nothing to narrow the  
8 term’s meaning in the context of a patent centered on powering LED-based light sources. So  
9 even if the patentee intended to define “controller” as “various apparatus relating to the operation  
10 of one or more light sources,” this phrase lacks the precision and reasonable clarity required for  
11 it to serve as the definition of a claim term.

12 The specification then arguably goes on to narrow what a “controller” could be by noting  
13 that this term could refer to any of three distinct types or combinations of structures: dedicated  
14 hardware, one or more microprocessors, or a combination of dedicated hardware and  
15 microprocessors.<sup>67</sup> But having multiple “alternative definitions for the term at issue” likewise  
16 fails to “provide reasonable clarity, deliberateness, and precision.”<sup>68</sup> So the specification  
17  
18

<sup>68</sup> *Abbot Lab ’ys*, 334 F.3d at 1355.

1 language Lepro relies on “does not define the claim term in a manner required under” Federal  
2 Circuit precedent.<sup>69</sup>

3  
4 **2. *Lepro fails to rebut the presumption that § 112(f) doesn’t apply to “controller.”***

5 Lepro argues that “controller” as used in asserted claims from the ’399 and ’138 patents<sup>70</sup>  
6 “is no more than a ‘black box recitation of structure’ that is simply a generic substitute for  
7 ‘means.’”<sup>71</sup> Signify counters that “controller” “is a common term that would have been readily  
8 understood by a” POSITA “at the time of invention.”<sup>72</sup>

9 Signify cites to definitions from two-electrical engineering dictionaries in support of its  
10 position that “controller” is a common term that a POSITA would understand as structural.<sup>73</sup>  
11 Lepro responds that these dictionary definitions show that “controller” and “control circuit” are  
12 terms “that can mean different things in different contexts” and cites to another technical  
13 dictionary that also contains multiple definitions for the term.<sup>74</sup> But, as Signify highlights, all the  
14 definitions are generally consistent with one another and reflect a class of structures attributable

15  
16  
17 <sup>69</sup>*Id.* “Processor” and “controller” are also *not* used interchangeably throughout the  
18 specifications and claims, which only further demonstrates this purported defining paragraph’s  
19 lack of clarity and precision. *Compare* ’399 Patent, 12:25–14:52 (discussing controllers that do  
20 not have processors) *with id.* at 14:53–22:52 (discussing processor-based controllers).

<sup>70</sup> The parties dispute the construction of the term “controller” in claims 7, 8, 17, 58, 59, and 60  
of the ’399 patent and claims 1, 9–11, and 20 of the ’138 patent. *See* ECF No. 48-1 at 3–12, 19–  
26.

<sup>71</sup> ECF No. 60 at 15 (citing *Egenera*, 972 F.3d at 1375). Since I have found that the specification  
doesn’t define “controller,” Lepro’s argument that this term is a nonce word because any  
structural meaning “has been negated by the specification’s express definition” fails. *Id.* at 16.

<sup>72</sup> ECF No. 54 at 20.

<sup>73</sup> *Id.* at 22.

<sup>74</sup> ECF No. 60 at 16.

1 to the term “controller.”<sup>75</sup> The dictionaries also all contain at least one definition consistent with  
 2 the term’s use in the ’399 and ’138 patents.<sup>76</sup> And a POSITA wouldn’t be viewing this term in  
 3 the abstract; she would be viewing it in the context of these patents’ claims and specifications.<sup>77</sup>

4 The specification also supports Signify’s position that a POSITA would understand  
 5 “controller” to be a structural term here. It contains multiple, detailed examples of different  
 6 types of circuits<sup>78</sup> or combinations of circuitry and microprocessors<sup>79</sup> that serve as controllers,  
 7 and the Federal Circuit has long recognized that POSITAs understand circuits, even in the  
 8 abstract, as connoting some structure.<sup>80</sup> The claims themselves also provide further structural  
 9 limitations. Even the claims that provide the least amount of detail about the controller recite its  
 10 objectives and outputs.<sup>81</sup> Such “contextual language” when dealing with circuits or circuitry

11  
 12  
 13 <sup>75</sup> ECF No. 64 at 11; *see also* ECF No. 54-9 at 4; ECF No. 54-10 at 4; ECF No. 60-1 at 6.

14 <sup>76</sup> ECF No. 54-9 at 4 (defining “controller” as “a device, such as a specialized variable resistor,  
 15 used to adjust current or voltage”); ECF No. 54-10 at 4 (defining “controller” as “[a] circuit,  
 16 mechanism, device, or system, which monitors one or more variables and automatically makes  
 the necessary adjustments in order to maintain operation within the specified parameters”); ECF  
 No. 60-1 at 6 (defining “controller” as “[a] device or group of devices that serves to govern, in  
 some predetermined manner, the electric power delivered to the apparatus to which it is  
 connected”).

17 <sup>77</sup> *See Phillips*, 415 F.3d at 1313 (“[T]he person of ordinary skill in the art is deemed to read the  
 18 claim term not only in the context of the particular claim in which the disputed term appears, but  
 19 in the context of the entire patent, including the specification.”); *see also Williamson*, 792 F.3d  
 1339 (court reviewed the specification and prosecution history to determine if they imparted  
 “structural significance to the term” as part of its § 112(f) analysis); *Apple Inc. v. Motorola, Inc.*,  
 757 F.3d 1286, 1296 (Fed. Cir. 2014) (same), *overruled on other grounds by Williamson*, 792  
 20 F.3d 1339; *Apex Inc. v. Raritan Computer, Inc.*, 325 F.3d 1364, 1373 (Fed. Cir. 2003) (same).

 based).

22 <sup>79</sup> *E.g.*, *id.* at 14:52–15:11, Fig. 7 (example with microprocessor-based circuitry).

23 <sup>80</sup> *Apex*, 325 F.3d at 1373.

<sup>81</sup> *See* ’138 Patent, Cl. 1 (noting that the controller is “coupled to the at least one LED and  
 configured to receive a power-related signal from an alternating current (A.C.) power source that

1 “conveys the structural arrangement of the circuit’s components and provides additional limiting  
 2 structure.”<sup>82</sup> And other claims detail structural subcomponents such as an adjustment circuit and  
 3 power circuitry.<sup>83</sup> So there is intrinsic and extrinsic evidence that the term “controller” would be  
 4 “understood by persons of ordinary skill in the art to have a sufficiently definite meaning as the  
 5 name for structure” when viewed in the context of the claims and specification.<sup>84</sup>

6 Signify also cites to a series of cases in which courts found that the term “controller” was  
 7 not subject to § 112(f).<sup>85</sup> In *Maxwell Limited v. Huawei Device USA Inc.*, the court observed  
 8 that its decision that § 112(f) didn’t apply was “consistent with multiple courts that have found  
 9 that ‘controller’ connotes structure that does not fall with the means-plus-function analysis.”<sup>86</sup>  
 10 Lepro, on the other hand, cites to two unpublished cases in which “control circuit” and “control”  
 11 were found subject to § 112(f), and it notes that the “context provided for each patent is  
 12 different.”<sup>87</sup> That is true, of course, but the number of courts finding “controller” not subject to

*LLC v. Ciena Corp.*, 792 F. App’x 789, 792 (Fed. Cir. 2019) (construing a “control” for  
 23 operating a beam-directing device). Lepro also attempts to distinguish the cases that Signify  
 cites on the grounds that none “involved a patent that expressly defined the term ‘controller,’”  
 but this argument is unavailing in light of my finding that the specification didn’t define this  
 term. ECF No. 60 at 15–16.

§ 112(f) tends to undermine Lepro’s position that this is a nonce word or a generic substitute for means.

Finally, during the *Markman* hearing Lepro’s counsel focused on the second part of the *Williamson* test—that the presumption against functional claiming “can be overcome . . . if the challenger demonstrates that the claim term . . . recites ‘function without reciting sufficient structure for performing that function.’”<sup>88</sup> Counsel argued that the term “controller” was too broad or vague to be sufficient structure for performing the claimed functions. But the Federal Circuit has long held that a term need not describe a specific or precise structure for the presumption against functional claiming to remain intact.<sup>89</sup> Identifying a class of structures that a POSITA would understand as capable of performing the claimed function is sufficient.<sup>90</sup> And, to the extent that Lepro is arguing that a POSITA wouldn’t understand a “controller” as structure for performing the claimed functions,<sup>91</sup> it doesn’t explain why this is the case.

Ultimately, it was Lepro’s burden to rebut the presumption against functional claiming and demonstrate that § 112(f) applies to the term “controller.” “To overcome this presumption, [Lepro] had to show, by a preponderance of evidence, that persons of ordinary skill in the art

Seagate Tech., Inc.*, 174 F.3d 1294, 1304 (Fed. Cir. 1999) (claim need “not recite every last detail of structure” in order to rebut presumption that § 112(f) *does* apply; rather “the claim need only recite ‘sufficient’ structure to perform entirely the claimed function”).

<sup>90</sup> See *XR Commc’ns, LLC*, 2023 WL 3529830, at \*2–3; see also *Dyfan*, 28 F.4th at 1366.

<sup>91</sup> See *XR Commc’ns, LLC*, 2023 WL 3529830, at \*2–3.

1 would not have understood the ‘[controller]’ limitation[] to connote structure in light of the claim  
2 as a whole.”<sup>92</sup> But there is both intrinsic and extrinsic evidence that the term “controller,” even  
3 “by itself[,] connotes some structure” and that the term, viewed in the context of the claims and  
4 specifications, would have a structural meaning understood by a POSITA at the time of  
5 invention.<sup>93</sup> So “[i]n the absence any more compelling evidence of the understanding of one of  
6 ordinary skill in the art, the presumption that § 112(f) does not apply is determinative.”<sup>94</sup> And  
7 Lepro simply hasn’t met its burden of showing by a preponderance of the evidence “that one of  
8 ordinary skill in the art believes the term does not recite sufficiently definite structure”<sup>95</sup> or  
9 “recites ‘function without reciting sufficient structure for performing that function.’”<sup>96</sup> So I find  
10 that § 112(f) doesn’t apply to the term “controller” here and that the term should be afforded its  
11 plain and ordinary meaning.<sup>97</sup>

<sup>97</sup> Lepro argues only that this is a means-plus-function term and doesn’t propose an alternative construction.

D. “Adjustment circuit”

| Signify’s Proposed Construction  | Lepro’s Proposed Construction | Court’s Construction       |
|--|-------------------------------|----------------------------|
| Plain and ordinary meaning<br>(If construction required: “A circuit that adjusts”) | Means-plus-function term      | Plain and ordinary meaning |

Lepro argues that “adjustment circuit” in the ’399 and ’138 patents is a means-plus-function term subject to § 112(f).<sup>98</sup> Signify contends that the term connotes structure and should be afforded its plain and ordinary meaning.<sup>99</sup>

Signify argues that “[c]ourts have generally interpreted the term ‘circuit’ to connote structure”<sup>100</sup> and cites to *Linear Technology Corporation v. Impala Linear Corporation* for the proposition that “[t]his is particularly true when the patent recites the performed function.”<sup>101</sup> Lepro counters that *Linear* is “inapplicable” because “it was decided eleven years before *Williamson* clarified the proper analysis under § 112(f).”<sup>102</sup> But *Williamson* overruled a line of cases applying a heightened burden or “strong presumption” against functional claiming in the absence of the term “means,” it did not overrule *Linear*’s general approach to analyzing circuit terms under § 112(f).<sup>103</sup> Indeed, this approach traces back to the 2003 decision of *Apex Inc. v. Raritan Computer, Inc.*, which predates the “strong presumption” line of cases that the

<sup>98</sup> ECF No. 60 at 20.

<sup>99</sup> ECF No. 54 at 26.

<sup>100</sup> *Id.* (citing *Massachusetts Inst. of Tech. & Elecs. For Imaging, Inc. v. Abacus Software*, 462 F.3d 1344, 1355 (Fed. Cir. 2006)).

<sup>101</sup> *Id.* (citing *Linear Tech. Corp. v. Impala Linear Corp.*, 379 F.3d 1311, 1320–21 (Fed. Cir. 2004)).

<sup>102</sup> ECF No. 60 at 21.

<sup>103</sup> *See Williamson*, 792 F.3d at 1347–49.

1 *Williamson* court overruled.<sup>104</sup> So the understanding that the term “circuit” connotes some  
 2 structure and will generally convey “sufficient structural meaning” to a POSITA when “coupled  
 3 with a description of the circuit’s operation”<sup>105</sup> is still good law. And as Signify points out,<sup>106</sup>  
 4 courts continue to cite to *Linear* for this specific proposition in post-*Williamson* decisions.<sup>107</sup>

5 Lepro also seeks to distinguish *Linear* on the ground that there was expert testimony in  
 6 that case that a POSITA would have been able to draw the circuits at issue based on their  
 7 names.<sup>108</sup> But while the *Linear* court did consider such evidence, it didn’t indicate that this was  
 8 required, and it evaluated a number of other factors as well.<sup>109</sup> Other courts, too, have used this  
 9 same analytical framework to find that circuit-based terms were not subject to § 112(f) in the  
 10 absence of such testimony.<sup>110</sup> So the fact that Signify has not presented expert testimony on this  
 11 issue is likewise not determinative here.

12 *Apex*, *Linear*, and other cases discussing circuit limitations indicate that “adjustment  
 13 circuit” would be “understood by persons of ordinary skill in the art to have a sufficiently  
 14 definite meaning as the name for structure.”<sup>111</sup> The term “circuit” by itself connotes at least

<sup>111</sup> *Williamson*, 792 F.3d at 1349.

1 some structure.<sup>112</sup> Including the term “adjustment” as a modifier or “adjectival qualification[]  
 2 further identif[ies] sufficient structure to perform the claimed functions to one of ordinary skill in  
 3 the art”<sup>113</sup> by “narrow[ing] the scope of those structures covered by the claim and mak[ing] the  
 4 term more definite.”<sup>114</sup> The “adjustment circuit” is part of the “controller” in all asserted  
 5 claims<sup>115</sup> and in two of them is also “coupled to the D.C. converter” contained in certain claims’  
 6 “power circuitry.”<sup>116</sup> Such connections impart further structural context.<sup>117</sup> All of the claims  
 7 also describe the objectives of the “adjustment circuit,”<sup>118</sup> and this language “conveys the  
 8 structural arrangement of the circuit’s components and provides additional limiting structure.”<sup>119</sup>  
 9 Plus, the specification contains structural descriptions and drawings of an exemplary  
 10 embodiment of an “adjustment circuit,” which only further indicates that a POSITA viewing the  
 11 term in this context would understand it to have a structural nature.<sup>120</sup>

12 There is intrinsic evidence that “adjustment circuit” would have been understood by a  
 13 POSITA as having structural meaning, so Lepro had to provide “more compelling evidence of  
 14  
 15

the understanding of one of ordinary skill in the art” to overcome the presumption.”<sup>121</sup> Because it failed to do so, I find that § 112(f) doesn’t apply to the term “adjustment circuit.”<sup>122</sup>

**E. “Power circuitry”**

| Signify’s Proposed Construction  | Lepro’s Proposed Construction | Court’s Construction       |
|--|-------------------------------|----------------------------|
| Plain and ordinary meaning<br>(If construction required:<br>“Components of a circuit that provides power”) | Means-plus-function term      | Plain and ordinary meaning |

Lepro contends that “power circuitry” is “no different than saying ‘power means’” so this term should also be subject to § 112(f).<sup>123</sup> Signify argues that “power circuitry” instead “is a common term that would be readily understood by a person of ordinary skill of art at the time of invention.”<sup>124</sup>

Lepro’s argument on this term mirrors its arguments for “controller” and “adjustment circuit” and fails for the same reasons. The term “circuitry,” even in the abstract, connotes some structure,<sup>125</sup> and there is no indication that the term is used here in a way that is inconsistent with its plain and ordinary meaning as understood by a POSITA.<sup>126</sup> The “power” modifier “further identif[ies] sufficient structure to perform the claimed functions to one of ordinary skill in the art”<sup>127</sup> by “narrow[ing] the scope of those structures covered by the claim and mak[ing] the term

<sup>121</sup> *Apex*, 325 F.3d at 1373; *see also Dyfan*, 28 F.4th at 1366 (same).

<sup>122</sup> Lepro argues only that this is a means-plus-function term and doesn’t propose an alternative construction.

<sup>123</sup> ECF No. 60 at 23.

<sup>124</sup> ECF No. 54 at 29.

<sup>125</sup> *See Apex*, 325 F.3d at 1373.

<sup>127</sup> *Id.* at 1374 (citing *Personalized Media*, 161 F.3d at 703).

1 more definite.”<sup>128</sup> In every asserted claim at issue, the “power circuitry” is a part of a  
 2 controller<sup>129</sup> that is coupled to at least one LED, and these connections impart further structural  
 3 context.<sup>130</sup> Even the claims that provide the least amount of detail about the “power circuitry”  
 4 describe its objectives and outputs<sup>131</sup> which “conveys the structural arrangement of the  
 5 circuit[ry]’s components and provides additional limiting structure.”<sup>132</sup> Two of the four asserted  
 6 claims recite their power circuitry’s structural subcomponents—a rectifier, a low-pass filter, and  
 7 a D.C. converter—as well as these individual circuits’ objectives and outputs.<sup>133</sup> And the way  
 8 “power circuitry” is discussed in the written description and depicted in figures also supports the  
 9 conclusion that a POSITA would understand the term to have “a sufficiently definite meaning as  
 10 the name for structure”<sup>134</sup> when viewed in light of the claims and specification.<sup>135</sup>

11 Lepro highlights that the dictionary definition of “power circuitry” Signify offers  
 12 involves “wires,” and it notes that the power circuitry of the ’138 and ’399 patents achieves  
 13 results that “mere ‘wires’” couldn’t.<sup>136</sup> This, according to Lepro, proves “that the term ‘power  
 14 circuitry’ does not denote a definite structure.”<sup>137</sup> But even assuming that this statement is valid,  
 15 the term “power circuitry” doesn’t need to denote *a* definite structure; it needs to connote  
 16

---

17 <sup>128</sup> *Personalized Media*, 161 F.3d at 703.

<sup>135</sup> *See* ’399 Patent, Figs. 4–8, 18:44–19:16.

<sup>136</sup> ECF No. 60 at 24. Lepro doesn’t cite any evidence in support of this statement.

<sup>137</sup> *Id.*

1 *sufficiently definite* structure or *sufficient* structure for performing the claimed function, and  
2 identifying a class of structures is enough to satisfy these standards.<sup>138</sup>

3 Otherwise, Lepro basically just reiterates the argument it advances for the terms  
4 “controller” and “adjustment circuit,” contending that “power circuitry” is simply a generic,  
5 black-box term for structure that is no different than the term “means.”<sup>139</sup> It highlights that the  
6 embodiments show either boxes labeled “power circuitry” or specific exemplary drawings of  
7 said circuitry.<sup>140</sup> But the fact that the term appears in a box in an embodiment doesn’t  
8 automatically render it a black-box term that is a generic substitute for “means.” And Lepro  
9 doesn’t address the indicia of structure imparted by the term itself and the surrounding claim  
10 language, nor does Lepro provide actual evidence that a POSITA wouldn’t believe that the term  
11 recites sufficiently definite structure or sufficient structure to perform the claimed functions.<sup>141</sup>

12 As with “controller” and “adjustment circuit,” Lepro failed meet its burden and rebut the  
13 presumption that § 112(f) doesn’t apply. So I find that “power circuitry” is not a means-plus-  
14 function term, and I afford it the plain and ordinary meaning.<sup>142</sup>

---

19 <sup>138</sup> See *Dyfan*, 28 F.4th at 1366 (quoting *Apple Inc.*, 757 F.3d at 1299) (noting that “[c]laim terms  
20 ‘need not connote a single, specific structure,’ and may instead ‘describe a class of structures’  
and still recite ‘sufficiently definite structure’ not to invoke” § 112(f)).

<sup>142</sup> Lepro argues only that this is a means-plus-function term and doesn’t propose an alternative construction.

1 **III. U.S. Patent No. 7,348,604**

2 **A. Overview**

3 The '604 patent is titled "light-emitting module" and "pertains to the field of lighting  
4 systems and in particular to a light-emitting module with versatile electromechanical mounting,  
5 connecting, and assembly capabilities."<sup>143</sup> The patent describes a module that is comprised of a  
6 thermally conductive substrate that is "thermally connected" to one or more light-emitting  
7 elements, a heat-dissipation element thermally coupled to said substrate, and "a housing element  
8 including fastening means for detachably coupling the housing element to the heat dissipation  
9 element."<sup>144</sup> The patent also teaches that the "housing element" includes a "transparent region"  
10 that enables "transmission of light emitted by the one or more light-emitting elements."<sup>145</sup>  
11 According to the patentee, the benefit of this simplified design is that it "improve[s]  
12 manufacturing, simplif[ies] assembly, and provide[s] ease of maintenance."<sup>146</sup> The module is  
13 also "further configured to provide the ability to create a lighting system comprising multiple  
14 lighting-emitting modules through the interconnection of two or more light-emitting  
15 modules."<sup>147</sup>

**B. “Light-emitting module”**

| <b>Signify’s Proposed Construction</b>  | <b>Lepro’s Proposed Construction</b>   | <b>Court’s Construction</b> |
|---|--|-----------------------------|
| Term appears in preamble, no construction required<br>(If construction required: “A self-contained assembly of electronic components and circuitry for emitting light”) | Preamble is limiting.<br>“A packaged light emitting device designed for use with other light emitting devices” | Preamble is not limiting    |

Lepro proposes that the term “light-emitting module,” which appears in the ’604 patent’s sole independent claim’s preamble, be construed as limiting the invention to “[a] packaged light[-]emitting device designed for use with other light[-]emitting devices.”<sup>148</sup> Signify argues that no construction is necessary because preamble language is generally not limiting and that none of the exceptions to that rule is applicable.<sup>149</sup>

“[A]s a general rule[,] preamble language is not treated as limiting.”<sup>150</sup> It may, however, “limit the invention if it recites essential structure or steps or if it is necessary to give life, meaning, and vitality to the claim.”<sup>151</sup> On the other hand, the Federal Circuit has “long ruled that a preamble is not limiting [if] a patentee defines a structurally complete invention in the claim body and uses the preamble to only state a purpose or intended use for the invention.”<sup>152</sup>

<sup>148</sup> ECF No. 60 at 25.

<sup>149</sup> ECF No. 54 at 34.

<sup>150</sup> *Cochlear Bone Anchored Sols. AB v. Oticon Med. AB*, 958 F.3d 1348, 1354 (Fed. Cir. 2020) (quoting *Aspex Eyewear, Inc. v. Marchon Eyewear, Inc.*, 672 F.3d 1335, 1347 (Fed. Cir. 2012)).

<sup>151</sup> *Id.* (quoting *Catalina Mktg. Int’l, Inc. v. Coolsavings.com, Inc.*, 289 F.3d 801, 808 (Fed. Cir. 2002)) (cleaned up).

<sup>152</sup> *Id.* (quoting *Arctic Cat Inc. v. GEP Power Prods., Inc.*, 919 F.3d 1320, 1327 (Fed. Cir. 2019)).

1 The Federal Circuit’s opinion in *Arctic Cat Inc. v. GEP Power Products Inc.*, with facts  
 2 that closely parallel those here, establishes that the term “light-emitting module” should not be  
 3 construed as limiting.<sup>153</sup> The preamble language at issue in *Arctic Cat* was “power distribution  
 4 module for a personal recreational vehicle,”<sup>154</sup> and it was that latter part of that term (“for a  
 5 personal recreational vehicle”) that the plaintiff argued was limiting.<sup>155</sup> The Federal Circuit  
 6 disagreed, reasoning that “the reference to a ‘personal recreational vehicle’ merely identifies an  
 7 intended use for the claimed power distribution module.”<sup>156</sup> The plaintiff did not demonstrate  
 8 “that the identified use itself imposes any structural requirement on the claimed module beyond  
 9 what [wa]s required by the bodies of the claims” and had not “shown any ‘reliance on the  
 10 preamble during prosecution to distinguish the claimed invention from prior art.’”<sup>157</sup> So the  
 11 Federal Circuit found that the preamble language was not limiting.<sup>158</sup>

12 The preamble language at issue in *Arctic Cat*, “for a personal recreational vehicle,”<sup>159</sup>  
 13 mirrors Lepro’s proposed “designed for use with other light[-]emitting devices” limitation.<sup>160</sup> As  
 14 Lepro points out, various statements in the ’604 patent do suggest that it was designed, at  
 15 minimum, to be compatible with such a use.<sup>161</sup> But this is no different than *Arctic Cat*, in which  
 16

21 <sup>157</sup> *Id.* (quoting *Catalina*, 289 F.3d at 808).

22 <sup>158</sup> *Id.* at 1329–30.

23 <sup>159</sup> *Id.* at 1327–30.

<sup>160</sup> ECF No. 60 at 25.

<sup>161</sup> *See, e.g.*, ’604 Patent 4:65–5:2 (“The light-emitting module according to the present invention is further configured to provide the ability to create a lighting system comprising multiple lighting-emitting modules through the interconnection of two or more light-emitting modules.”).

1 the patents’ titles, specifications, and preambles indicated that those modules were designed to  
 2 be used in personal recreational vehicles.<sup>162</sup> So to the extent that the term “light-emitting  
 3 module” implies that this invention was “designed to be used with other light-emitting devices,”  
 4 this, like in *Arctic Cat*, merely identifies a purpose or intended use for the invention.

5 Lepro argues that the term “light-emitting module” is limiting because it “recites essential  
 6 structure.”<sup>163</sup> But Lepro doesn’t describe what this purported “essential structure” actually is.<sup>164</sup>  
 7 Like the plaintiff in *Arctic Cat*, Lepro fails to explain how the invention’s overall “modular  
 8 characteristic” or an intent that it be used along with other modules “imposes any structural  
 9 requirement on the claimed module beyond what is required by the bod[y] of” claim 1.<sup>165</sup> Even  
 10 the broad reading of the term “light-emitting module” that Lepro advances does not add any

---

13 <sup>162</sup> *Arctic Cat*, 919 F.3d at 1322 (noting that the two patents at issue were “both titled ‘Power  
 14 Distribution Module for Personal Recreational Vehicle’”); *id.* at 1327–30. Lepro also notes that  
 15 the “[t]he modular characteristic is touted repeatedly as a feature of the present invention” and  
 16 cites cases in which courts referenced similar language in support of limiting the scope of a  
 17 claim. ECF No. 60 at 26 n.90. But all of these cases are inapposite because they involved  
 18 construing claim-body terms (rather than reading in additional limitations from preambles) and  
 19 are also distinguishable because they dealt with limiting a claim’s scope based on specific  
 20 features described in the specification (rather than broad statements about the overall invention’s  
 21 intended use). See *Fenner Invs., Ltd. v. Cellco P’ship*, 778 F.3d 1320, 1322, 1324 (Fed. Cir.  
 22 2015); *Trading Techs. Int’l, Inc. v. eSpeed, Inc.*, 595 F.3d 1340, 1352–54 (Fed. Cir. 2010);  
 23 *Honeywell Int’l, Inc. v. ITT Indus., Inc.*, 452 F.3d 1312, 1315, 1318 (Fed. Cir. 2006).

<sup>163</sup> ECF No. 60 at 26–27.

<sup>164</sup> *Id.*; see *Catalina*, 289 F.3d at 808 (citing *Corning Glass Works v. Sumitomo Elec. U.S.A. Inc.*,  
 868 F.2d 1251, 1257 (Fed. Cir. 1989)) (emphasis added) (“[W]hen reciting *additional* structure  
 or steps underscored as important by the specification, the preamble may operate as a claim  
 limitation.”).

<sup>165</sup> *Arctic Cat*, 919 F.3d at 1328. Lepro does assert that “a POSITA would have understood the  
 claimed ‘light-emitting module’ to be an essential structural limitation because the ’604  
 inventors were not working on general improvements for any type of LED luminaires.” ECF  
 No. 60 at 27. But this, again, merely goes to the invention’s purpose or intended use, not the  
 actual structures it comprises.

1 structure essential to the module itself—it at most “merely adds structure of which the body-  
2 recited module is a part.”<sup>166</sup>

3 This case is therefore unlike *Deere & Co. v. Bush Hog, LLC*, in which the court found the  
4 preamble limiting because it informed the meaning of a specific structural limitation in the  
5 claim’s body.<sup>167</sup> The “rotary cutter deck” preamble language there was “necessary to understand  
6 the subject matter encompassed by the claim,” which otherwise merely recited a “box section  
7 having torsional stiffness.”<sup>168</sup> In particular, it “inform[ed] the meaning of the ‘torsional stiffness  
8 limitation” because the claimed box section needed to “possess sufficient stiffness to withstand  
9 the torsional loads imposed by the operation of a rotary cutter.”<sup>169</sup> But Lepro has not argued that  
10 the ’604 patent’s “modular characteristic” informs the meaning of or further limits any of the  
11 actual claim structures described in the body of claim 1—the substrate, heat-dissipation element,  
12 and housing element. Rather, all of Lepro’s arguments focus on limiting the overall module  
13 itself by a potential use that factored into its design.

14 *Corning Glass Works v. Sumitomo Electric U.S.A., Inc.*, which Lepro also cites, is  
15 similarly distinguishable. The preamble language described the invention at issue as an “optical  
16 waveguide,” which is “a unique type of optical fiber.”<sup>170</sup> And for it to function as an “optical  
17 waveguide” (rather than just a “general improvement[] in conventional optical fibers”) the  
18 invention required “a particular structural relationship defined in the specification” but not  
19  
20

---

21 <sup>166</sup> *Arctic Cat*, 919 F.3d at 1329.

22 <sup>167</sup> *Deere & Co. v. Bush Hog, LLC*, 703 F.3d 1349, 1358 (Fed. Cir. 2012).

23 <sup>168</sup> *Id.* (quoting U.S. Patent No. 6,052,980, 4:44–53).

<sup>169</sup> *Id.*

<sup>170</sup> *Corning Glass*, 868 F.2d at 1256 (quoting U.S. Patent No. 3,659,915, 1:34–39)

1 actually reflected in the body of the claim.<sup>171</sup> But Lepro has not contended, much less  
2 demonstrated, that the light-emitting module will not function as intended unless some additional  
3 structural limitations are read into claim 1.

4       So while Lepro highlights a number of exceptions to the general rule that a preamble is  
5 not limiting, none of them applies here. This preamble does not “impose[] any structural  
6 requirement on the claimed module beyond what is required by the bod[y] of” the claim,<sup>172</sup> nor  
7 is it essential to understand limitations in the actual body of the claim.<sup>173</sup> Lepro has not shown  
8 that, in the absence of further limitations, the invention is not structurally complete.<sup>174</sup> At  
9 bottom, Lepro’s position is that the invention’s intended purpose should further limit the claim’s  
10 scope. But this argument is inconsistent with Federal Circuit precedent.<sup>175</sup> So I find that the  
11 term “light-emitting module” is not limiting.

---

19 <sup>171</sup> *Corning Glass*, 868 F.2d at 1257 (“The invention is restricted to those fibers that work as  
20 waveguides as defined in the specification, which is not true with respect to fibers constructed  
21 with the limitations of paragraphs (a) and (b) only. Thus, we conclude that the claim preamble in  
this instance does not merely state a purpose or intended use for the claimed structure.”).

## C. “Fastening means”

| Signify’s Proposed Construction   | Lepro’s Proposed Construction   | Court’s Construction   |
|---|---|--|
| Function: detachably coupling the housing element to the heat-dissipation element.  | Function: releasably connecting the housing element to the heat-dissipation element.                      | Function: detachably coupling the housing element to the heat-dissipation element.                   |
| Structure: fastening means as described at 5:18–24, 6:18–24, 7:25–26., 7:42–51, 7:55–67 and/or identified by reference numeral 450 in Figure 4 and equivalents thereof. | Structure: The tabs 450 shown in Figure 4 and described in col. 7:42–51 and their structural equivalents. | Structure: The tabs 450 shown in Figure 4 and described at 7:42–51 and their structural equivalents. |

The parties agree that the term “fastening means” is a means-plus-function limitation that invokes § 112(f), but they disagree over how the function and corresponding structure should be construed.<sup>176</sup> “The construction of a means-plus-function limitation follows a two-step approach.”<sup>177</sup> The court must first “identify the claimed function, staying true to the claim language and the limitations expressly recited by the claims.”<sup>178</sup> “Once the functions performed by the claimed means are identified, [the court] must then ascertain the corresponding structures in the written description that perform those functions.”<sup>179</sup> “A disclosed structure is corresponding ‘only if the specification or the prosecution history clearly links or associates that structure to the function recited in the claim.’”<sup>180</sup>

<sup>176</sup> ECF No. 54 at 37; ECF No. 60 at 27.

<sup>177</sup> *Omega Eng’g, Inc.*, 334 F.3d at 1321.

<sup>178</sup> *Id.* (citing *Cardiac Pacemakers, Inc.*, 296 F.3d at 1113 (internal citation omitted)).

<sup>179</sup> *Id.* (citing *Cardiac Pacemakers*, 296 F.3d at 113).

<sup>180</sup> *Id.* (quoting *B. Braun Med. Inc. v. Abbot Lab’ys*, 124 F.3d 1419, 1424 (Fed. Cir. 1997)).

1                   ***I. Function***

2           Signify argues that the function should be the one listed in the independent claim at  
 3 issue,<sup>181</sup> which notes that the housing element includes a fastening means “for detachably  
 4 coupling the housing element to the heat[-]dissipation element.”<sup>182</sup> Signify contends that  
 5 “‘detachably’ and ‘coupling’ are plain English words,” and that “[t]here is simply no basis to  
 6 rewrite the straightforward function of the recited fastening means.”<sup>183</sup> Lepro counters that the  
 7 only structure that corresponds to this function are the “tabs” designated by reference numeral  
 8 450 in Figure 4 (“the Figure 4 tabs”) and that, because the specification describes the Figure 4  
 9 tabs as securing “a releasable connection” between the housing and heat-dissipation elements,  
 10 the court should construe the function as “releasably connecting” instead.<sup>184</sup> Lepro also posits  
 11 that its preferred construction would resolve “potential ambiguity” that might arise because  
 12 Signify “intends its construction to cover non-releasable couplings implemented by permanent  
 13 . . . or semi-permanent fasteners” described in a part of the specification.<sup>185</sup>

14           Lepro essentially imports its structural position over to its functional argument, but it  
 15 cites no authority for the proposition that unambiguous functional language in a claim should be  
 16 modified to conform with arguably narrower language used alongside a specific corresponding  
 17 structure in the specification. And any potential ambiguity regarding permissible structures is  
 18 mooted by my findings in the next section. In short, “detachably” and “coupling” are plain  
 19 English words, and Lepro has not shown that I need to further construe them. So I “stay[] true to  
 20

---

21 <sup>181</sup> ECF No. 57 at 29.

22 <sup>182</sup> ’604 Patent, Cl. 1.

23 <sup>183</sup> ECF No. 54 at 37–38.

<sup>184</sup> ECF No. 60 at 32 (citing ’604 Patent, 7:42–51).

<sup>185</sup> *Id.* at 32.

the claim language and the limitations expressly recited by the claims”<sup>186</sup> and construe the function as “detachably coupling the housing element to the heat-dissipation element.”

## 2. *Corresponding structure*

Signify argues that “the ’604 Patent provides numerous different examples of coupling parts and highlights language from the specification that lists various examples of “mechanical fasteners,” “magnetic mounting systems,” and “adhesives.”<sup>187</sup> It contends that “fastening means” structure should include all of these examples plus the tabs described in the specification and featured in Figure 4.<sup>188</sup> Lepro responds that these examples do not correspond to the claimed function and that the only structure in the specification that is clearly linked to said function are the Figure 4 tabs.<sup>189</sup>

### *i. The “fastening means” examples Signify highlights are not clearly linked with the “detachably coupling” function.*

The parties’ dispute focuses on a paragraph from column 5 of the specification,<sup>190</sup> which lists examples of different types of fastening means:

In one embodiment, the light-emitting modules are mechanically mounted to various receiving means or [a] mounting system such as a track, or similar structure as would be readily understood. Where the light emitting modules are mounted to a track, for example, the track may be attached to various structures such as

<sup>186</sup> *Id.* (citing *Cardiac Pacemakers, Inc.*, 296 F.3d at 1113 (internal citation omitted)).

<sup>187</sup> ECF No. 54 at 38–39.

<sup>188</sup> *Id.*; see also ’604 Patent, Fig. 4, 7:42–51.

<sup>189</sup> ECF No. 60 at 28.

<sup>190</sup> Signify’s proposed construction also references a few other sentences in the written description where it contends corresponding structure can be found. See ECF No. 54 at 37 (stating that corresponding structure for the “detachably coupling” function is also found at ’604 Patent, 5:18–24, 6:18–24, 7:25–26, 7:55–67). While some of these sentences do indeed reference “fastening means” in the context of the “detachably coupling” function, none of them provide specific examples of actual structures that can perform that function.

the inside back wall of a canopy, or any other surface as would be readily understood. **Alternatively, the light-emitting modules can be mounted to a desired location by fastening means. The fastening means can be mechanical fasteners for example, screws, bolts [or] rivets or the like, magnetic mounting systems, adhesives for example, pressure sensitive tape, glue or epoxy or the like, or other forms of fastening means as would be understood by a worker skilled in the art.**<sup>191</sup>

The first textual clue that the structures listed here do not correspond to the function at issue (detachably coupling the heat-dissipation and housing elements in the light-emitting module) is that they directly correspond to an entirely different function (mounting an entire light-emitting module or multiple modules to some external structure). Signify cites to *Pedigo Products, Inc. v. Kimberly-Clark Worldwide, Inc.* for the proposition that the same structures can perform multiple functions.<sup>192</sup> But *Pedigo Products* also makes it clear that the structure must still be clearly linked to the function at issue,<sup>193</sup> and this paragraph doesn't mention the heat-dissipation element, the housing element, or the "detachably coupling" function at all.<sup>194</sup> It exclusively discusses various ways to mount complete light-emitting modules on external mounting systems, tracks, surfaces, etc.<sup>195</sup> The use of the term "fastening means" is the only arguable "link" between the column 5 structures and the claimed function. But the surrounding

<sup>191</sup> '604 Patent, 5:11–24 (emphasis added).

<sup>192</sup> ECF No. 64 at 20 (citing *Pedigo Prods., Inc. v. Kimberly-Clark Worldwide, Inc.*, 2014 WL 12776227, at \*23 (N.D. Ga. Aug. 20, 2014)).

<sup>193</sup> *Pedigo Prods.*, 2014 WL 12776227, at \*24 (finding structure *was* clearly linked when the specification noted that it was attached to the specific area that the claimed function involved, but finding another structure *was not* clearly linked to that function when the descriptions of the structure did not include "any reference to the relevant claimed function").

<sup>194</sup> '604 Patent, 5:11–24.

<sup>195</sup> *Id.*

1 language and context of the term’s use in this paragraph effectively severs any opaque link that  
 2 this common usage might have created.<sup>196</sup>

3 Any potential link between the column 5 examples and the claimed function is also  
 4 undermined by other intrinsic evidence. While both parties focus on the permanence or  
 5 detachability of some of the examples,<sup>197</sup> the “magnetic mounting system” is perhaps the starkest  
 6 example of a structure that seems directed towards the function discussed in that specific  
 7 paragraph—mounting light-emitting modules at desired locations.<sup>198</sup> The inclusion of “glue”  
 8 and “epoxy” also cuts against Signify’s argument that the patentee intended claim 1’s fastening  
 9 means to include all of these structures.<sup>199</sup> While described in this paragraph as potential  
 10 “fastening means,” later—and in the specific context of attaching the housing and heat-  
 11 dissipation elements—these same structures are described as potential “sealing means” that  
 12 seemingly could be used *in addition* to the fastening means coupling those two elements in one

---

13  
 14 <sup>196</sup> See *Omega Eng’g*, 334 F.3d at 1321 (quoting *B. Braun Med.*, 124 F.3d at 1424) (“A disclosed  
 15 structure is corresponding ‘only if the specification or the prosecution history clearly links or  
 16 associates that structure to the function recited in the claim.’”). Signify cites *Acromed Corp. v.*  
 17 *Sofamor Danek Grp., Inc.*, 253 F.3d 1371, 1382–83 (Fed. Cir. 2001) and *Kinik Co. v. ITC*, 362  
 18 F.3d 1359, 1364 (Fed. Cir. 2004), for the proposition that a court should not “limit a patent to its  
 19 preferred embodiments in the face of evidence of broader coverage by the claims.” See ECF No.  
 20 54 at 39. There is no dispute that this, as a general proposition, is correct. But Signify still has  
 to identify structures that clearly correspond to the claimed function, and as I explain below the  
 only structure in the ’604 patent that does so is that shown by the Figure 4 tabs. *Acromed* is also  
 materially distinguishable as the court was not assessing corresponding structure in the first  
 instance—rather, it was analyzing whether the court should have imported *specific dimensions*  
 discussed in the written description into the identified corresponding structure. 253 F.3d at  
 1382–83. And *Kinik* did not involve identifying corresponding structure as part of a means-plus-  
 function analysis. 362 F.3d at 1364–65.

21 <sup>197</sup> See ECF No. 60 at 30; ECF No. 64 at 20.

22 <sup>198</sup> ’604 Patent, 5:11–24. Notably, the ’604 patent never uses the term “mount” to describe the  
 23 interaction between the housing and heat dissipation elements, and there is no indication  
 elsewhere in the ’604 Patent that the patentee envisioned magnetically coupling or connecting  
 these specific elements together.

<sup>199</sup> *Id.*

embodiment of the invention.<sup>200</sup> Indeed, the '604 patent notes that, in this particular embodiment, the “attachment mechanism” connecting the housing and heat-dissipation elements “can be further employed . . . to press a sealing means such as glue or epoxy . . . between the housing element and the heat[-]dissipation element” to seal the cavity between these two elements “from environmental conditions.”<sup>201</sup> Dependent claim 12, which relies on claim 1, appears to relate to this particular embodiment.<sup>202</sup> But if the “fastening means” of claim 1 already included glue and epoxy as potential structures for coupling the housing and heat-dissipation elements, then claim 12 would be superfluous rather than further limiting claim 1.

Signify’s position is also undermined by language in the '604 patent that suggests that the patentee envisioned the fastening means of claim 1 being integrated into the housing element. Claim 1, for example, provides that the invention comprises “a housing element *including* fastening means for detachably coupling the housing element to the heat[-]dissipation element.”<sup>203</sup> And the specification also notes that “[t]he housing element *comprises* fastening means to secure the various components of the light-emitting module together.”<sup>204</sup> These verbs imply that the patentee intended for these fastening means to actually be a part of the housing

---

<sup>200</sup> *Id.* at 7:55–67.

<sup>201</sup> *Id.*

<sup>202</sup> *Id.* at Cl. 12 (emphasis deleted) (“The light-emitting module of claim 1, wherein a sealant substance is positioned between the housing element and the heat dissipation element for environmental sealing between the housing element and the heat dissipation element.”).

<sup>203</sup> *Id.* at Cl. 1 (emphasis added).

<sup>204</sup> *Id.* at 7:25–27 (emphasis added).

1 element,<sup>205</sup> but several of the structures listed in column 5 (e.g., screws, bolts, rivets, glue,  
2 epoxy) would not generally be understood to be part of the components they attach.<sup>206</sup>

3 Signify highlights that the “’604 Patent discusses ‘fastening means’ and the  
4 interchangeability of components (including of the housing element) outside the context of the”  
5 Figure 4 tabs embodiment.<sup>207</sup> It contends that this discussion undermines Lepro’s position that  
6 this is the only structure that corresponds to the “detachably coupling” function.<sup>208</sup> But Signify  
7 fails to explain how the use of the Figure 4 tabs would make the housing element or other  
8 components any less interchangeable than, for example, the screws, bolts, and rivets from the  
9 column 5 examples that Signify touts, as the components would seemingly need to be fabricated  
10 with these types of fastening means in mind. Regardless, discussions of fastening means and  
11 interchangeability outside of the specific context of the Figure 4 tabs does not create a clear link  
12

---

13 <sup>205</sup> See *Include*, The New Oxford American Dictionary (2d ed. 2005) (defined as to “comprise or  
14 contain as part of a whole”); *Comprise*, The New Oxford American Dictionary (2d ed. 2005)  
15 (defined as to “consist of” or “be made up of”). In *Phillips*, the Federal Circuit found that use of  
16 the term “comprising” imposed a “clear requirement[]” that the objects being discussed “must be  
17 part of” the structure that comprised them. 415 F.3d at 1324. And as will be discussed in the  
18 following section, other extrinsic evidence supports this interpretation as well.

19 <sup>206</sup> ’604 Patent, 5:11–24. The parties also dispute whether evidence from the ’604 patent’s U.S.  
20 prosecution history—in particular, a statement made by an examiner in a notice of allowance—  
21 suggests that the fastening means of claim 1 must be integrated into the housing element. See  
22 ECF No. 54 at 40; ECF No. 60 at 31; ECF No. 64 at 21–22. The examiner noted that prior art  
23 “discloses including an adhesive 185 which serves as fastening means coupling substrate 160 to  
the heat dissipation, but fails to disclose that the fastening means (adhesive 185) is part of the  
housing 140.” ECF No. 54-12 at 3. As Lepro argues, this sentence structure does tend to  
suggest that the contrast the examiner was drawing between the ’604 Patent and the prior art was  
that the fastening means of the ’604 patent were “part of the housing,” whereas the prior art’s  
fastening means were not. But as Signify points out, the prior art’s fastening means appear to be  
for coupling the *substrate* (rather than the housing element) to the heat-dissipation element. ECF  
No. 54-12 at 3. Without additional context, the examiner’s statement does not provide clarity on  
this particular issue.

<sup>207</sup> ECF No. 64 at 19–20.

<sup>208</sup> *Id.*

1 between the claimed function and the column 5 examples where one did not exist in the first  
2 place.

3  
4 *ii. Statements made during a foreign patent prosecution support  
Lepro's position.*

5 Lepro also highlights statements that the '604 patent applicant made to the European  
6 Patent Office related to a patent application with the "same specification" and a claim 1 that is  
7 the same as that of the '604 patent.<sup>209</sup> At various points, the applicant describes the fastening  
8 means as being "included in" or "integrated" with the housing element.<sup>210</sup> These statements,  
9 according to Lepro, demonstrate that the '604 patent's claim 1 fastening means are meant to be  
10 integrated with the housing element and thus cannot encompass a number of the structures listed  
11 in column 5. Signify counters that the Federal Circuit has cautioned that relying on such  
12 statements might not always be appropriate in claim-construction analysis given the disparate  
13 procedural and legal requirements in foreign jurisdictions.<sup>211</sup>

14 What Signify doesn't appear to dispute is that these statements do concern a  
15 corresponding European patent<sup>212</sup> and that they clearly (and repeatedly) distinguish it from prior  
16 art based on the fact that claim 1's fastening means are part of the housing element.<sup>213</sup> Instead,

17  
18 <sup>209</sup> ECF No. 60 at 30–31.

19 <sup>210</sup> ECF No. 60-4 at 2–6.

20 <sup>211</sup> See ECF No. 64 at 20–21. Signify also highlights that nothing in the statements made to the  
21 EPO directly limited the invention to the Figure 4 tabs. The issue is whether the statements  
indicated the invention was limited to integrated fastening means *like* the Figure 4 tabs, as this  
would necessarily undermine Signify's position that claim 1 should also cover various auxiliary  
fastening means that are not part of the housing element.

22 <sup>212</sup> See ECF No. 60-2; ECF No. 60-3.

23 <sup>213</sup> *E.g.*, ECF No. 60-4 at 2 ("Claim 1 is novel with respect to [prior art] . . . in that the housing  
element . . . includes fastening means for detachably coupling the housing element to the heat  
dissipation element."); *id.* at 2–3 (emphasis added) (distinguishing prior art as it was "obvious  
. . . that **the cover itself includes no fastening means** for detachably coupling the cover to a

Signify argues that Europe does not have § 112(f) and “has different laws of interpretation regarding means-plus-function terms,” so statements made to the EPO “should be given little weight.”<sup>214</sup> But Signify doesn’t explain why statements made during a patent’s prosecution about an invention’s design are rendered meaningless by the absence of a direct § 112(f) equivalent in European patent law.

While the Federal Circuit has cautioned “against indiscriminate reliance on the prosecution of corresponding foreign applications in claim construction analysis,”<sup>215</sup> it has not foreclosed consideration of (or even reliance on) such evidence when the statements “are relevant and not related to unique aspects of foreign patent law.”<sup>216</sup> In *Apple Inc. v. Motorola, Inc.*, for example, the Federal Circuit found that the district court did not err in relying upon statements that were made during a foreign prosecution to distinguish an invention from prior art.<sup>217</sup> Just as in *Apple Inc.*, the statements here were made during a foreign prosecution to distinguish the invention from prior art. And they are clear<sup>218</sup> and “consistent with the claims

---

heat[-]dissipation element.”); *id.* at 4 (emphasis added) (“**As the housing element includes fastening means** for detachably coupling the housing element to the heat[-]dissipation element, there is provided a secure connection between the housing element and the heat[-]dissipation element. The connection is also convenient, e.g. due to the fact that the fastening means **are included in the housing element**, and there is **no need of auxiliary fastening means**.”); *id.* at 6 (distinguishing prior art because it “disclose[d] various attachment devices which would lead to (additional) devices applied . . . to try to solve the problem of providing a secure and convenient connection between the housing element and the heat[-]dissipation element” and noting that “[i]n contrast, **the integrated fastening means of the housing element in the present invention provides a convenient coupling arrangement**”).

<sup>214</sup> ECF No. 64 at 21.

<sup>215</sup> *AIA Eng’g Ltd. v. Magotteaux Int’l S/A*, 657 F.3d 1264, 1279 (Fed. Cir. 2011).

<sup>216</sup> *Apple Inc.*, 757 F.3d at 1312.

<sup>217</sup> *Id.* at 1312.

<sup>218</sup> *Id.* at 1313 (citing *Gillette Co. v. Energizer Holdings, Inc.*, 405 F.3d 1367, 1374 (Fed. Cir. 2005)).

1 and the invention described in the specification.”<sup>219</sup> So while I need not rely on these statements  
 2 in finding that there is no clear link between the column 5 structures and the claimed function  
 3 because that is apparent from the face of the ’604 patent, they do buttress the intrinsic evidence  
 4 that already supports this conclusion.

5 ***iii. Signify’s claim-differentiation argument fails.***

6 Signify next argues that Lepro’s proposal is “barred by the principles of claim  
 7 differentiation.”<sup>220</sup> Under the “claim differentiation” doctrine, “each claim in a patent”  
 8 presumptively “has a different scope.”<sup>221</sup> It thus “creates a presumption that [] dependent claim  
 9 limitations are not included in the independent claim.”<sup>222</sup> But this “is not a hard and fast rule,  
 10 and the presumption can be overcome by a contrary construction required by the specification or  
 11 prosecution history.”<sup>223</sup> And this “judicially developed guide to claim interpretation . . . cannot  
 12 override” the statutory requirements of § 112(f).<sup>224</sup>

13 Signify contends that Lepro’s means-plus-function construction for “fastening means”  
 14 would run afoul of the claim-differentiation doctrine because it would give claim 1 the same  
 15 construction as claim 11. This would be the case, Signify contends, because the Figure 4 tabs  
 16 require the housing element to be formed from a flexible material to allow coupling with heat-

---

17  
 18 <sup>219</sup> *Id.* at 1313 (citing *AIA*, 657 F.3d at 1279). The foreign prosecution statements, for example,  
 19 repeatedly note that the housing element “includes” fastening means, *e.g.* ECF No. 60-4 at 2,  
 20 which the applicant interprets as being integrated with the housing element, *id.* at 6, and which is  
 21 consistent with the use of the phrases “includes” and “comprises” in the ’604 patent. ’604  
 22 Patent, 7:25–27, Cl. 1.

23 <sup>220</sup> ECF No. 54 at 39.

<sup>221</sup> *See Comark Commc’ns, Inc. v. Harris Corp.*, 156 F.3d 1182, 1187 (Fed. Cir. 1998).

<sup>222</sup> *GE Lighting*, 750 F.3d at 1310 (citing *Liebel-Flarsheim Co. v. Medrad, Inc.*, 358 F.3d 898,  
 909 (Fed. Cir. 2004)).

<sup>223</sup> *Id.* (citing *Seachange Int’l v. C-COR, Inc.*, 413 F.3d 1361, 1369 (Fed. Cir. 2005)).

<sup>224</sup> *Laitram Corp. v. Rexnord, Inc.*, 939 F.2d 1533, 1538 (Fed. Cir. 1991).

1 dissipation element, and “claim 11 recites that the housing element is formed from a flexible  
 2 material.”<sup>225</sup> So limiting the claimed function to the structure of the Figure 4 tabs would  
 3 “improperly render claim 11 superfluous.”<sup>226</sup> Lepro counters that claim 1 would still be broader  
 4 than claim 11 under Lepro’s proposed construction because it wouldn’t explicitly limit the  
 5 housing element to being formed from flexible material, and therefore claim differentiation  
 6 doesn’t apply.<sup>227</sup>

7 Preliminarily, a means-plus-function construction for claim 1 will include the Figure 4  
 8 tabs *and* equivalents thereof,<sup>228</sup> and Signify doesn’t address whether any equivalents would also  
 9 necessarily require the flexible material described in dependent claim 11. So it is not entirely  
 10 clear that these claims would share an identical scope, which is a prerequisite for application of  
 11 the claim-differentiation doctrine.<sup>229</sup> But even assuming that Signify is correct that construing  
 12 the claimed function’s structure as the Figure 4 tabs would render claim 11 entirely superfluous,  
 13 the Federal Circuit has long held that claim differentiation does not override application of  
 14 § 112(f).<sup>230</sup> So Signify’s claim-differentiation argument is “unavailing” because the structure  
 15 depicted by the Figure 4 tabs is the only structure that is “specifically disclosed and tied to [the  
 16  
 17

18 <sup>225</sup> ECF No. 54 at 39–40; ECF No. 64 at 22.

19 <sup>226</sup> *Id.* at 40.

20 <sup>227</sup> ECF No. 60 at 31–32.

21 <sup>228</sup> *See Laitram Corp.*, 939 F.2d at 1538 (citing *Pennwalt Corp. v. Durand-Wayland, Inc.*, 833 F.2d 931, 934 (Fed. Cir. 1987)) (noting that an independent claim would literally be broader than a dependent claim with the same structure because the independent claim included structural equivalents under § 112(f), whereas the dependent claim did not).

22 <sup>229</sup> *Id.* (so long as the claims do not have “exactly the same scope . . . claim differentiation is maintained”). Claim 1’s “detachably coupling” function is also arguably broader than claim 11’s  
 23 “releasably connecting” language.

<sup>230</sup> *Id.*

1 claimed] function in the specification,” and Signify “cannot rely on claim differentiation to  
2 broaden a means-plus-function limitation beyond” that structure.<sup>231</sup>

3 In short, the only structure in the specification that is clearly linked with the “detachably  
4 coupling” function is that depicted by the Figure 4 tabs. Both intrinsic and extrinsic evidence  
5 runs counter to Signify’s position that the fastening means examples in column 5 correspond to  
6 this function, and Signify cannot use claim differentiation to broaden this means-plus-function  
7 limitation beyond its sole corresponding structure in the specification. So I construe the structure  
8 for the “detachably coupling the housing element to the heat[-]dissipation element” function to  
9 be that shown by tabs 450 of Figure 4 and described in written description at 7:42–51 and its  
10 structural equivalents.

11 **D. “Thermally connected/thermally coupled”**

| 12 Signify’s Proposed Construction   | Lepro’s Proposed Construction   | Court’s Construction       |
|--|---|----------------------------|
| 13 Plain and ordinary meaning<br>14 (If construction required:<br>15 “Transfer via thermal conduction, convection, or radiation.”) | “connected via thermal conduction, convection, or radiation; not thermally insulated” | Plain and ordinary meaning |

16 The parties agree that the terms “thermally connected” and “thermally coupled” are  
17 synonymous in the context of the ’604 patent, but they disagree whether construction is required  
18 and, if it is, what that construction should be. Lepro proposes that I construe these terms to mean  
19 “connected via thermal conduction, convection, or radiation; not thermally insulated.”<sup>232</sup> Signify  
20  
21

22 \_\_\_\_\_  
23 <sup>231</sup> See *Saffran v. Johnson & Johnson*, 712 F.3d 549, 563 (Fed. Cir. 2013) (citing *Laitram Corp.*, 939 F.2d at 1538).

<sup>232</sup> ECF No. 60 at 33.

1 contends that these terms need no construction, and, alternatively, they should be construed to  
2 mean “transfer via thermal conduction, convection, or radiation.”<sup>233</sup>

3       The parties’ real dispute is over the “not thermally insulated” limitation that Lepro seeks  
4 to read into these terms. Lepro contends that a POSITA would not recognize a thermal  
5 connection or coupling if thermal insulation is present, but Lepro offers no evidence to support  
6 this statement.<sup>234</sup> The only evidence Lepro cites as “intrinsic support” for adding this  
7 “clarification language” is that the patent teaches that the heat dissipation via thermal  
8 conduction, convection, or radiation is “passive.”<sup>235</sup> This, according to Lepro, means that it  
9 “takes place *by itself* as a natural phenomenon in physics”—i.e., in the absence of thermal  
10 insulation.<sup>236</sup> But Lepro then goes on to explain that thermal conduction, convection, or  
11 radiation between two things would still take place passively even if they were thermally  
12 insulated.<sup>237</sup> So it is not clear how Lepro is reading in this limitation from the specification’s use  
13 of a term “passive” when it later acknowledges that that term applies both in the presence and  
14 absence of thermal insulation.

15       Imposing negative limitations must be justified by the “plain text of the claims” or the  
16 specification; otherwise, “departure from the claims’ ordinary meaning” is not warranted.<sup>238</sup> So  
17 I reject Lepro’s request that I read between the lines of the specification to create a negative  
18 limitation that has no direct intrinsic support, and that I do so based solely upon Lepro’s own  
19

20 <sup>233</sup> ECF No. 54 at 41; ECF No. 64 at 23–24.

21 <sup>234</sup> ECF No. 60 at 33.

22 <sup>235</sup> *Id.*

23 <sup>236</sup> *Id.*

<sup>237</sup> *Id.*

<sup>238</sup> *Omega Eng’g, Inc. v. Raytek Corp.*, 334 F.3d 1314, 1333 (Fed. Cir. 2003).

1 ambiguous statements on natural physical phenomena and contentions about what a POSITA  
2 would understand these terms to mean.

3 The parties otherwise identify no real dispute over the scope of these terms that would  
4 require a construction. Lepro has not presented intrinsic or extrinsic evidence that these terms  
5 don't have a plain and ordinary meaning that would be understood by a POSITA,<sup>239</sup> nor does it  
6 really even argue that this is the case.<sup>240</sup> As these terms are used in the patents, the surrounding  
7 claim language and the specification will tell the jury everything it needs to know. And there is  
8 no evidence that the patentee gave these terms a special meaning. So I find that no construction  
9 is necessary for these terms.

10 **E. "Housing element including a transparent region"**

| 11 Signify's Proposed Construction  | Lepro's Proposed Construction                    | Court's Construction       |
|---|--|----------------------------|
| 12 Plain and ordinary meaning<br>13 (If construction required: "A housing part including a transparent region") | "a single structure having a transparent region" | Plain and ordinary meaning |

14  
15 Lepro proposes that I construe the term "housing element including a transparent region"  
16 to mean "a single structure having a transparent region."<sup>241</sup> Signify contends that this term needs  
17 no construction.<sup>242</sup> Lepro's argument rests on its interpretation of the term "element," which it  
18 contends "strongly suggests the recited structure is 'element[ary]' and thus is one physical piece"

19  
20  
21 <sup>239</sup> *Phillips*, 415 F.3d at 1312–13.

22 <sup>240</sup> While Lepro does assert that a POSITA would not recognize a thermal connection or coupling if thermal insulation is present, it does not contend that a POSITA wouldn't recognize these terms as having an ordinary and customary meaning.

23 <sup>241</sup> ECF No. 60 at 34.

<sup>242</sup> ECF No. 54 at 43.

1 rather than something comprised of multiple pieces.<sup>243</sup> But this already tenuous argument is  
 2 undermined by intrinsic use of the term “element” in a different context to describe devices that  
 3 are not single structures but rather are comprised of multiple pieces.<sup>244</sup> The only other support  
 4 Lepro provides for its construction is that the housing element is shown as a single structure in  
 5 several embodiments in the specification.<sup>245</sup> But the Federal Circuit has “repeatedly warned  
 6 against confining claims to those embodiments,”<sup>246</sup> and Lepro has offered no other evidence  
 7 beyond its internally inconsistent interpretation of the word “element” that persuades me this is  
 8 the rare case in which deviation from that general practice is warranted.<sup>247</sup> Plus there is no  
 9 evidence that the patentee gave this phrase a special meaning. So I find that no construction is  
 10 necessary for this term.

#### 11 **IV. U.S. Patent No. 8,063,577**

##### 12 **A. Overview**

13 The ’577 patent discloses “[a] driver circuit for operating one or more light[-]emitting  
 14 diodes (LEDs)”<sup>248</sup> designed for “operating a LED with high efficiency.”<sup>249</sup> LEDs need precise  
 15 “voltage or preferably current control” to operate because they “exhibit large current variation in  
 16 response to small voltage variation,”<sup>250</sup> which would result in varying brightness of the LED.

---

17 <sup>243</sup> ECF No. 60 at 34.

18 <sup>244</sup> ’604 Patent, 3:45–65 (noting that the term “light-emitting element” can be used to define a  
 19 number of structures, one of which is “a combination of the specific device that emits the  
 radiation together with a housing or package within which the device or devices are placed”).

20 <sup>245</sup> ECF No. 60 at 34.

21 <sup>246</sup> *Philips*, 415 F.3d at 1323.

22 <sup>247</sup> *See id.* at 1323–24.

<sup>248</sup> ’577 Patent (abstract).

23 <sup>249</sup> *Id.* at 1:42–43.

<sup>250</sup> *Id.* at 1:11–13.

This control can be achieved by using a known “switched mode power supply” current-control system like a buck converter,<sup>251</sup> but such a system generally requires a “relatively large [electromagnetic interference] filter” and a “relatively large inductor” and is not optimized for efficiency or size,<sup>252</sup> a problem that the drive circuit of the ’577 patent is designed to rectify. The terms “connected in series” and “coupled in series” are used to describe relationships between subcomponents of the primary “driver circuit” described in the ’577 patent’s sole independent claim.<sup>253</sup>

**B. “Connected/coupled in series”**

| Signify’s Proposed Construction | Lepro’s Proposed Construction  | Court’s Construction       |
|---------------------------------|--|----------------------------|
| Plain and ordinary meaning      | The “clear, simple definition” or “basic idea of a series circuit” as described by Dr. Zane at 34:4–38:15, and in the IEEE dictionary <i>i.e.</i> : the same current passes through each [connected/coupled] device in completing its path to the source of supply | Plain and ordinary meaning |

The parties agree that the terms “connected in series” and “coupled in series” mean the same thing and should share the same construction.<sup>254</sup> Lepro proposes that these terms should be

<sup>251</sup> *Id.* at 1:18–20.

<sup>252</sup> *See id.* at 1:36–43.

<sup>253</sup> *Id.* at Cl. 1 (describing a “set of input terminals,” a “transformer,” and a “resonant capacitor” with “a primary winding of the transformer and the resonant capacitor being coupled in series to the set of input terminals,” as well as “an output circuit” with a “set of output terminals” and “buffer circuitry” that “comprises an inductor connected in series with the set of output terminals”).

<sup>254</sup> ECF No. 54 at 45 n.8; ECF No. 60 at 35.

1 construed as “the same current passes through each [connected/coupled] device in completing its  
2 path to the source of supply.”<sup>255</sup> Signify argues that no construction of these terms is required.<sup>256</sup>

3 The dispute over these terms has shifted over time. Lepro apparently moved away from  
4 its initial proposed construction, which would have precluded the electrical current passing  
5 through various components from branching.<sup>257</sup> Much of Signify’s initial argument about these  
6 terms focused on its objections to a construction that included this “without branching”  
7 limitation,<sup>258</sup> as did the declaration of its expert, Dr. Regan Zane.<sup>259</sup> Lepro has now said that it  
8 “largely agrees with the deposition testimony of Signify’s expert, Dr. Zane, about the meaning of  
9 the term[s].”<sup>260</sup> And Lepro based its latest proposed construction on portions of Dr. Zane’s  
10 testimony and an Institute of Electrical and Electronics Engineers (IEEE) dictionary definition  
11 that it discussed with him during his deposition.<sup>261</sup>

12 But Lepro took issue with Signify’s initial arguments that, according to Lepro,  
13 “incorrectly suggest that the meaning of ‘in series’ can encompass its opposite, ‘in parallel.’”<sup>262</sup>  
14 Much of its argument focused on this distinction, highlighting that the ’577 patent’s use of this  
15 term, Zane’s testimony, and the competing dictionary definitions the parties presented confirmed  
16 that “in series” does not encompass “in parallel.”<sup>263</sup> But Signify then clarified that it is not  
17

---

18 <sup>255</sup> ECF No. 60 at 35.

19 <sup>256</sup> ECF No. 54 at 44.

20 <sup>257</sup> *Id.*

21 <sup>258</sup> ECF No. 54 at 44–49.

22 <sup>259</sup> ECF No. 54-16 at 10–15.

23 <sup>260</sup> ECF No. 60 at 35.

<sup>261</sup> *Id.*

<sup>262</sup> *Id.*

<sup>263</sup> *Id.* at 35–38.

1 taking the position that “in series” encompasses “in parallel,” noting that the dictionary definition  
 2 it cited is inconsistent with such a position and agreeing that “[c]urrent does not flow  
 3 sequentially through parallel components,” which is “a feature of series components.”<sup>264</sup> So  
 4 despite the various arguments both parties have advanced, it appears they have reached a point  
 5 where they have a similar understanding of what these terms mean. And the dictionary  
 6 definitions both sides rely on are largely consistent.<sup>265</sup>

7 The final sticking point is a word in Lepro’s proposed IEEE-definition-based  
 8 construction, which requires that current passing through each coupled/connected device be the  
 9 “same.”<sup>266</sup> Lepro highlights that Dr. Zane agreed that this was “a good description of a series  
 10 circuit” and would be how he would teach it in introductory electronics.<sup>267</sup> But Dr. Zane also  
 11 clarified that this current would not be exactly the same (or identical) in more complex circuits,  
 12 which Lepro doesn’t dispute.<sup>268</sup> Despite this “caveat,” Lepro’s position, which it reiterated  
 13 during the *Markman* hearing, is that this simplified definition should be adopted because it  
 14 would be easier to explain to the jury and that any real-world complexities are factual-  
 15 infringement questions that need not be addressed at this juncture.<sup>269</sup>

16 I find that these terms’ ordinary meaning governs for several reasons. The first is that Dr.  
 17 Zane averred that these terms “are widely used and readily understood by those of ordinary skill  
 18  
 19

---

20 <sup>264</sup> ECF No. 64 at 26.

<sup>269</sup> *Id.*

1 without further definition”<sup>270</sup> and reiterated this opinion during his deposition.<sup>271</sup> This testimony  
 2 stands un rebutted. Neither party has argued that the patentee gave this phrase a special meaning.  
 3 And Lepro doesn’t appear to disagree with Dr. Zane about what these terms actually mean, but  
 4 rather disagrees with him (and Signify) about whether this simplified construction is warranted  
 5 or necessary<sup>272</sup> I therefore see no need to further construe these terms, and I find that they  
 6 should be accorded their plain and ordinary meaning.

7 Lepro also argued (primarily during the *Markman* hearing) that I should adopt its  
 8 concededly simplistic construction—despite it not explicitly encompassing the “caveat” Dr. Zane  
 9 described and that Lepro agrees with—because it would be easier for the jury to understand. But  
 10 Lepro’s proposal would not make things easier for a jury. The jury would first need to be told  
 11 that the current that passes between devices that are connected/coupled in series is the “same.”  
 12 But then the parties would need to explain that the word “same” doesn’t have its ordinary  
 13 meaning in this context, and that the current doesn’t need to be exactly the same or identical for  
 14 devices to be considered “in series.” Ultimately, it appears the parties or their experts will need  
 15 to explain the nuances of these terms. But adopting Lepro’s proposed construction would add an  
 16 additional step that, if anything, would only increase the risk of jury confusion.

17 Lepro’s final argument that “claims may not be construed by reference to the accused  
 18 device” misses the mark. Dr. Zane’s testimony on this “caveat” was stated in general terms.<sup>273</sup>

---

19 <sup>270</sup> ECF No. 54-16 at 9.

20 <sup>271</sup> ECF No. 60-5 at 77:16–21.

21 <sup>272</sup> ECF No. 54 at 35.

22 <sup>273</sup> ECF No. 60-5 at 49:2–16 (cleaned up) (“And as I mentioned more broadly, for more  
 23 advanced circuit design, a skilled person would also understand how to apply that definition to  
 this concept in a more complex circuit, but they would recognize—for example, you know, the  
 word ‘same’ in that definition wouldn’t necessarily mean absolutely identical currents are  
 flowing in each resistor . . . . But in that more general sense, it doesn’t have to be identical.”).

1 And Lepro does not dispute his opinion on this particular point—that the current would not be  
 2 exactly the same or identical in “more advanced circuit design” generally.<sup>274</sup> So this argument  
 3 would be unavailing even if I was relying on Dr. Zane’s testimony to construe these terms rather  
 4 than deferring to his unrebutted statements that they have a plain and ordinary meaning.

5 **V. U.S. Patent No. 9,709,253**

6 **A. Overview**

7 The ’253 patent concerns a recessed LED light fixture.<sup>275</sup> “A recessed light fixture is a  
 8 light fixture that is installed in a hollow opening in a ceiling or other surface,”<sup>276</sup> and the ’253  
 9 patent focuses particularly on a “downlight can fixture” like those often found in ceilings.<sup>277</sup> The  
 10 patent explains that recessed fixtures are traditionally configured to use “an incandescent lamp or  
 11 a compact fluorescent lamp.”<sup>278</sup> But these lamps are not as energy efficient as LEDs, and there  
 12 are also environmental concerns related to disposal of compact fluorescent lamps because they  
 13 include mercury.<sup>279</sup> And, at the time of invention, LEDs did not “fit in existing incandescent  
 14 lamp sockets and require[d] complex electrical and thermal management systems.”<sup>280</sup> One  
 15 aspect of the invention that relates to “thermal management” is a “heat sink” that is “thermally

16

coupled” to an “LED package” and “configured to transfer heat from the LEDs.”<sup>281</sup> The patent teaches that “[t]he heat sink can have any of a number of different configurations.”<sup>282</sup>

**B. “A heat sink comprising an upper surface and a lower surface”**

| Signify’s Proposed Construction | Lepro’s Proposed Construction   | Court’s Construction       |
|---------------------------------|---|----------------------------|
| Plain and ordinary meaning      | “the heat sink having a surface at a top end and another surface at a bottom end” | Plain and ordinary meaning |

Lepro proposes that the phrase “a heat sink comprising an upper surface and a lower surface” should be construed as “the heat sink having a surface at the top end and another surface at a bottom end.”<sup>283</sup> Signify contends that the phrase needs no construction.

“In some cases, the ordinary meaning of claim language as understood by a person of skill in the art may be readily apparent even to lay judges, and claim construction in such cases involves little more than the application of the widely accepted meaning of commonly understood words.”<sup>284</sup> This appears to be one of those cases. The only substantive difference between the claim language and Lepro’s proposed construction is that Lepro seeks to construe the term “upper” to be “at a top end,” and the term “lower” to be “at a bottom end.”<sup>285</sup> But upper and lower are “commonly understood words” that neither I nor the jury would have difficulty

---

<sup>281</sup> *Id.* at 2:31–32.

<sup>282</sup> *Id.* at 2:32–33.

<sup>283</sup> ECF No. 60 at 38.

<sup>284</sup> *Phillips*, 415 F.3d at 1314 (citing *Brown v. 3M*, 265 F.3d 1349, 1352 (Fed. Cir. 2001)).

<sup>285</sup> ECF No. 60 at 38.

1 grasping the meaning of.<sup>286</sup> And in plain English, these terms would not be understood as  
 2 synonymous with “at a top end” and “at a bottom end.”

3 Lepro argues that “[a] study of the specification made it clear that the terms ‘upper  
 4 surface’ and ‘lower surface’ refer to the surfaces at the top and bottom ends of the heat sinks.”<sup>287</sup>  
 5 In support of this argument, it relies on Figure 8 from the ’253 patent—an exploded view of the  
 6 LED module of Figure 3 that contains an “exemplary” heat sink labeled heat sink 310.<sup>288</sup> Heat  
 7 sink 310 comprises what appear to be two surfaces on opposing ends of the heat sink.<sup>289</sup> The  
 8 detailed description does describe one of them—310a—as the “bottom surface.”<sup>290</sup> It also notes  
 9 that heat sink 310 has a “top end” 310e, though 310e is never referred to as the “top surface” or a  
 10 “surface at the top” of the heat sink.<sup>291</sup>

11 The principal problem with Lepro’s approach here is that it is trying to “import  
 12 limitations from the specification into the claims,” which is something that courts should  
 13 generally avoid doing.<sup>292</sup> In *Phillips*, the Federal Circuit observed that, when viewing the  
 14 specification in this context, it will often “become clear whether the patentee is setting out  
 15 specific examples of the invention . . . or whether the patentee instead intends for the claims and  
 16

---

17 <sup>286</sup> *See id.*; *see also Brown*, 265 F.3d at 1352 (agreeing with construction of a claim that was “the

 did “not require elaborate interpretation”).

19 <sup>287</sup> ECF No. 60 at 39.

20 <sup>288</sup> ’253 Patent, Fig. 8; 4:11–13.

21 <sup>289</sup> *Id.* at Fig. 8. I say “appear” only because Figure 8 doesn’t actually show the “top end” of heat  
 sink 310, though Figure 9, which is an “elevational cross-sectional top view of exemplary heat  
 sink 310,” does.

22 <sup>290</sup> *Id.* at 7:36–38.

23 <sup>291</sup> *Id.* (emphasis deleted) (Fins 311 extend substantially perpendicular from the bottom surface  
 310a, towards the top end 310e of the heat sink 310.”).

<sup>292</sup> *Phillips*, 415 F.3d at 1323.

embodiments in the specification to be strictly coextensive.”<sup>293</sup> “The manner in which the patentee uses a term within the specification and claims usually will make the distinction apparent.”<sup>294</sup> And while in some cases “it will be hard to determine whether a person of skill in the art would understand the embodiments to define the outer limits of the claim term or merely to be exemplary in nature,”<sup>295</sup> this is not one of those cases. The specification makes it clear that Figure 8 and heat sink 310 are exemplary in nature,<sup>296</sup> and the summary section notes that “[t]he heat sink can have any number of configurations.”<sup>297</sup> While heat sink 310 is the only embodiment of a heat sink in the specification,<sup>298</sup> other claims recite heat sinks with different configurations than heat sink 310,<sup>299</sup> so this is clearly not the only way to fabricate a heat sink under the ’253 patent.

Lepro also posits that its “proposal implicitly requires that the claimed heat sink have some thickness to allow for both an upper surface and a lower surface” such that sheet metal

<sup>295</sup> *Id.*

<sup>296</sup> ’253 Patent, 4:11–13 (emphasis deleted) (“FIG. 8 is a perspective exploded side view of the LED module of FIG. 3, in accordance with certain exemplary embodiments.”); *id.* at 7:21–23 (“FIG. 9 is an elevational cross-sectional top view of the exemplary heat sink 310. FIG. 10 illustrates a thermal scan of the exemplary heat sink 310 in operation.”).

<sup>297</sup> *Id.* at 2:32–33.

<sup>298</sup> In certain exemplary embodiments, a reflector housing 320 is configured to act as a secondary heat sink, *e.g.*, *id.* at Fig. 11, 8:45–51, but heat sink 310 is the only exemplary embodiment of a heat sink that performs that function primarily.

<sup>299</sup> *E.g.*, *id.* at Cl. 1 (emphasis deleted) (“[A] heat sink, wherein the heat sink includes an inner surface . . . .”); *id.* at Cl. 6 (“The downlight module of claim 1, wherein the heat sink comprises a first heat sink and a second heat sink, an inner surface of the second heat sink surrounding at least a portion of a reflector.”).

1 would be excluded “even though it can dissipate heat.”<sup>300</sup> Heat sink 310 does have “some  
 2 thickness.”<sup>301</sup> But Lepro’s proposed construction doesn’t imply any thickness greater than the  
 3 plain claim language or require these surfaces to be a certain size. It would merely fix the  
 4 locations of the claimed upper and lower surfaces to the top and bottom ends of the heat sink.  
 5 One could, for example, create a sheet-metal heat sink in which the sheet metal extends either  
 6 towards or away from an inner channel at the top and bottom ends to create “surfaces” similar to  
 7 bottom surface 320ca of reflector housing 320.<sup>302</sup> This heat sink would be quite thin generally  
 8 but would surely still fall within the plain meaning of Lepro’s proposed construction. And that  
 9 assumes that the surface area of the edges of this hypothetical sheet-metal heat sink would not be  
 10 sufficient to constitute a “surface” within the meaning of the ’253 patent without extending at the  
 11 top and bottom ends, which is an issue that Lepro glosses over in its briefing.<sup>303</sup> So even if I  
 12 were to adopt Lepro’s proposed construction, it would not include a vague implied-thickness  
 13 requirement without further intrinsic evidence and argument to support it.

14 The jury and I are familiar with what the words in the phrase “a heat sink comprising an  
 15 upper surface and a lower surface” mean. And there is no evidence that the patentee gave this  
 16 phrase a special meaning. So I find that no construction is necessary for this phrase.

---

17 <sup>300</sup> ECF No. 60 at 39.

18 <sup>301</sup> See ’253 Patent, Fig. 8.

19 <sup>302</sup> Reflector housing 320 is much “thinner” than heat sink 310 and contains surfaces that are far  
 20 smaller, but it could be configured to operate as a secondary heat sink. See ’253 Patent, 8:45–51.

21 <sup>303</sup> While the location of the upper and lower surfaces doesn’t necessarily imply any particular  
 22 level of thickness, a certain amount of surface area may need to present for something to be  
 23 actually considered, or properly function as, a “surface.” And this, in turn, might involve some  
 level of “thickness” in certain instances. But as the sheet-metal example demonstrates, surface  
 area doesn’t necessarily correlate to overall thickness of a heat sink. And regardless, Lepro has  
 not explained how the ’253 patent explicitly or implicitly requires the heat sink to have a  
 minimum overall thickness or have surfaces with a minimum amount of surface area in order for  
 it to function as intended in all cases/outside of certain exemplary embodiments.

1 **VI. U.S. Patent No. RE49,320**

2 **A. Overview**

3 The '320 patent involves an LED lighting device with a built-in Radio Frequency (RF)  
 4 antenna that allows a device to communicate with other devices and be operated via a remote  
 5 control.<sup>304</sup> But an LED lighting device's components are "made from electrically conductive  
 6 materials . . . that could . . . significantly influence the RF communication with remote controls  
 7 or other lamps."<sup>305</sup> So the patent discloses a device in which such materials are located  
 8 sufficiently below the antenna so they don't interfere with its RF signals.<sup>306</sup> The antenna is also  
 9 placed "in a portion of the external housing" of the lighting device (or "outer enclosure") made  
 10 from "non-shielding material that does not disturb RF waves in reaching the antenna."<sup>307</sup> One  
 11 aspect of the invention is a "heat sink" that "may form part of the outer enclosure."<sup>308</sup> The '320  
 12 patent also teaches that the LED "light source" is "arranged to generate light along an optical  
 13 axis."<sup>309</sup>

---

20 <sup>304</sup> See '320 Patent, 1:25–62.

21 <sup>305</sup> *Id.* at 1:40–46.

22 <sup>306</sup> *Id.* at 2:51–3:6.

<sup>309</sup> *Id.* at 2:7–8.

**B. “Configured for generating light along an optical axis”**

| <b>Signify’s Proposed Construction</b> | <b>Lepro’s Proposed Construction</b>  | <b>Court’s Construction</b> |
|--|---|-----------------------------|
| Plain and ordinary meaning             | “the beams from one or more light-emitting diodes are set up to be parallel to a single optical axis” | Plain and ordinary meaning  |

Lepro proposes that the phrase “configured for generating light along an optical axis” be construed as “the beams from one or more light-emitting diodes are set up to be parallel to a single optical axis.”<sup>310</sup> Signify argues that no construction is required.<sup>311</sup>

Lepro argues that (1) the “an optical axis” claim language limits the invention to a single optical axis, and (2) generating light along a single optical axis “would necessarily require configuring LED beams to be parallel to that optical axis.”<sup>312</sup> Much of its briefing is focused on explaining why a single optical axis is required. But construction is not necessary to clarify that point; use of the word “an” in the claim language is enough. And Signify agrees that the claim requires the light-emitting device to have a single optical axis.<sup>313</sup>

So the only real dispute here is whether LEDs generating light “along” an optical axis must necessarily only emit beams that are parallel to that axis. In support of its position that parallelism is required, Lepro relies solely on a general dictionary that defines “along” as “on a line or course parallel and close to.”<sup>314</sup> But even if I were to endorse this particular definition, Lepro fails to explain the basis of its position that *all* emitted light beams must run parallel to the

---

<sup>310</sup> ECF No. 60 at 41.

<sup>311</sup> ECF No. 54 at 53.

<sup>312</sup> ECF No. 60 at 41–42.

<sup>313</sup> ECF No. 64 at 29.

<sup>314</sup> ECF No. 60 at 42 (citing American Heritage College Dictionary (2002)).

1 optical axis. The plain language of the claim requires that the LEDs be principally configured to  
2 generate light in that direction, but there is no limiting language in the claim or the specification  
3 that states the LEDs can “only” or “exclusively” emit light beams along or parallel to the optical  
4 axis.

5 Signify explained during the *Markman* hearing that LEDs do not generally emit  
6 completely parallel beams in the absence of some additional structure acting upon the light, such  
7 as a collimator like the one described in dependent claim 16 or depicted Figures 2–4. In the  
8 absence of such a device, LEDs configured to generate light along an optical axis would  
9 generally emit light both along the optical axis and necessarily outward from the bulb as well.  
10 And this is consistent with Figure 1, which shows an LED “that generates light along an optical  
11 axis” but has a three-sided upper enclosure through which the “the light escapes.”<sup>315</sup> Lepro, both  
12 in its briefing and during oral argument, repeatedly stated that it was not trying to require use of  
13 a collimator to achieve parallel beams,<sup>316</sup> possibly to avoid claim differentiation issues.<sup>317</sup> But it  
14 didn’t directly dispute Signify’s point that LEDs don’t generally emit parallel beams, nor did it  
15 ever explain how LEDs can be “set up” to emit parallel beams in the absence of some additional  
16 structure like a collimator acting upon the light.

17 Lepro’s argument that the claim language requires LED beams to be set up to generate  
18 only parallel beams is therefore unpersuasive. The jury and I are familiar with what the words in  
19 the phrase “configured for generating light along an optical axis” mean, and there is no evidence

---

20  
21 <sup>315</sup> ’320 Patent, Fig. 1.

22 <sup>316</sup> See ECF No. 60 at 41 (describing Signify’s argument that Lepro’s proposed construction would require a collimator as a “false assertion”).

23 <sup>317</sup> The doctrine of claim differentiation “creates a presumption that [] dependent claim limitations are not included in the independent claim.” *GE Lighting*, 750 F.3d at 1310 (citing *Seachange Int’l*, 413 F.3d at 1369).

that the patentee gave this phrase a special meaning. So I find that no construction is necessary for this phrase.

**C. “The heat sink forming at least a portion of an outer enclosure”**

| Signify’s Proposed Construction | Lepro’s Proposed Construction   | Court’s Construction       |
|---------------------------------|---|----------------------------|
| Plain and ordinary meaning      | “at least a segment of an outer enclosure is formed by a heat sink such that the heat sink is exposed to the outside” | Plain and ordinary meaning |

Lepro proposes that the phrase “the heat sink forming at least a portion of an outer enclosure” be construed to mean “at least a segment of an outer enclosure is formed by the heat sink such that the heat sink is exposed to the outside.”<sup>318</sup> Signify argues this phrase should be accorded its plain and ordinary meaning.<sup>319</sup>

Lepro advances several arguments in support of reading its proposed “exposed to the outside” limitation into the claim language, but none of them are persuasive.<sup>320</sup> It again highlights that “all of the embodiments depicted in the patent figures consistently show [that] the heat sinks form a ‘part’ of the outer enclosure exposed to the outside.”<sup>321</sup> But this, of course, is not enough, as the Federal Circuit has “repeatedly warned against confining claims to those embodiments” in the specification.<sup>322</sup>

---

<sup>318</sup> ECF No. 60 at 43.

<sup>319</sup> ECF No. 54 at 56–57.

<sup>320</sup> Lepro also proposes using the term “segment” instead of “portion” to resolve potential ambiguity over whether the heat sink needs to be “exposed to the outside.” ECF No. 60 at 44–45. But this argument is rendered moot by my rejection of Lepro’s construction of this phrase and conclusion that claim does not limit the heat sink to being exposed to the outside.

<sup>321</sup> ECF No. 60 at 43.

<sup>322</sup> *Philips*, 415 F.3d at 1323.

1 Lepro also attempts to extrapolate this limitation from other language in the patent. It  
 2 first notes that “the term ‘outer’ is readily understood to mean ‘located on the outside,  
 3 external.’”<sup>323</sup> But the word “outer” clearly modifies the “enclosure” that the heat sink forms a  
 4 portion of, not the heat sink itself. Lepro then contends that its proposed construction is  
 5 “consistent with the stated objective of the ’320 Patent to provide ‘a very effective heat sink.’”<sup>324</sup>  
 6 But Lepro doesn’t point to any intrinsic or extrinsic evidence that explicitly states or even  
 7 suggests that “exposure to the outside” is the only way to achieve “a very effective heat sink,”  
 8 which is itself a somewhat ambiguous term. And statements in the specification that follow this  
 9 phrase tend to suggest that the heat sink’s electrical resistivity—which is determined by what the  
 10 heat sink is made of—plays a (if not the) critical role in making the heat sink “very effective” as  
 11 this term is meant in this specific context.<sup>325</sup>

12 Finally, the two cases Lepro relies on are materially distinguishable. In *Medicines Co. v.*  
 13 *Mylan, Inc.*, the Federal Circuit relied on an embodiment to construe the term “efficiently  
 14 mixing,” which was a particular claimed process.<sup>326</sup> It did so because this embodiment was “the  
 15 only *description* of efficient mixing . . . that cast[] light on what efficient mixing” actually was  
 16 and that would “enable[] one of ordinary skill in the art to achieve the objects of the claimed  
 17 invention.”<sup>327</sup> But there is no need to turn to embodiments in the ’320 patent to understand what

---

18 <sup>323</sup> ECF No. 60 at 43.

19 <sup>324</sup> *Id.* at 44.

20 <sup>325</sup> Compare ’320 Patent, 2:2–4 (noting that because of the lighting device’s very small size “a  
 21 very effective heat sink is needed to remove the unavoidable heat dissipation in the light source”) *with id.* at 2:36–39 (“Having a heat sink with an electrical resistivity of less than 0.01Ωm serves  
 22 to provide a heat sink with substantial thermal conductivity, thus allowing the lighting device to  
 be miniature sized.”).

23 <sup>326</sup> *Medicines Co.*, 853 F.3d at 1307.

<sup>327</sup> *Id.* at 1309; *see also id.* (quoting *Retractable Techs., Inc. v. Becton, Dickinson & Co.*, 653  
 F.3d 1296, 1305 (Fed. Cir. 2011) (“Accordingly, construing ‘efficiently mixing’ to incorporate

1 a heat sink, as a structure, actually is. And Lepro has not demonstrated that limiting the way the  
 2 heat sink is arranged in relation to an outer enclosure is necessary for a POSITA to create this  
 3 invention so that it functions as intended.<sup>328</sup> Lepro also relies *Nystrom v. TREX Co.*, in which  
 4 the court rejected the plaintiff's efforts to "broaden the term 'board' to encompass relatively  
 5 obscure definitions that we[re] not supported by the written description or prosecution  
 6 history."<sup>329</sup> But in *Nystrom* "[t]he written description and prosecution history consistently use[d]  
 7 the term 'board' to refer to wood decking materials from a log."<sup>330</sup> Lepro only highlights that  
 8 several embodiments show the heat sink exposed to the outside, a far cry from the pervasive use  
 9 in multiple contexts detailed in *Nystrom*.<sup>331</sup>

10 In short, the arguments and cases Lepro cites in support of its proposed construction are  
 11 all unconvincing. As the phrase "the heat sink forming at least a portion of an outer enclosure"  
 12 is used in the patent, the surrounding claim language will tell the jury everything it needs to  
 13 know. And there is no evidence that the patentee gave the phrase a special meaning. So no  
 14 construction is necessary for this phrase.

15  
 16  
 17  
 18 the efficient mixing conditions of Example 5 is necessary to 'tether the claims to what the  
 19 specification[] indicate[s] the inventor actually invented.'").

20 <sup>328</sup> It was also critical to the *Medicines* court's analysis that the patentee had relied on that  
 21 embodiment "to overcome prior art cited during prosecution and did not cite any other examples  
 22 of efficient mixing." 853 F.3d at 1308. But Lepro hasn't provided evidence that the patentee  
 23 here relied on the '320 patent's embodiments showing that the heat sink is "exposed to the  
 outside" to distinguish prior art.

<sup>329</sup> *Nystrom v. TREX Co.*, 424 F.3d 1136, 1145 (Fed. Cir. 2005).

| Term  | Signify's Proposed Construction   | Lepro's Proposed Construction  | Court's Construction       |
|---|---|--|----------------------------|
|   | thermal conduction, convection, or radiation.”)   | radiation; not thermally insulated”  |                            |
| <i>Housing element including a transparent region</i>                 | Plain and ordinary meaning<br>(If construction required: “A housing part including a transparent region”) | “a single structure having a transparent region”   | Plain and ordinary meaning |
| <i>Connected/coupled in series</i>                                    | Plain and ordinary meaning  | The “clear, simple definition” or “basic idea of a series circuit” as described by Dr. Zane at 34:4–38:15, and in the IEEE dictionary <i>i.e.</i> : the same current passes through each [connected/coupled] device in completing its path to the source of supply | Plain and ordinary meaning |
| <i>A heat sink comprising a upper surface and a lower surface</i>     | Plain and ordinary meaning  | “the heat sink having a surface at a top end and another surface at a bottom end”  | Plain and ordinary meaning |
| <i>Configured for generating light along an optical axis</i>          | Plain and ordinary meaning  | “the beams from one or more light-emitting diodes are set up to be parallel to a single optical axis”  | Plain and ordinary meaning |
| <i>The heat sink forming at least a portion of an outer enclosure</i> | Plain and ordinary meaning  | “at least a segment of an outer enclosure is formed by a heat sink such that the heat sink is exposed to the outside”  | Plain and ordinary meaning |

**Conclusion**

**IT IS THEREFORE ORDERED** that I adopt the above constructions.

**IT IS FURTHER ORDERED** that this case is referred to the magistrate judge for the mandatory settlement conference required by Local Patent Rule 1-19(a).
